Higher Engineering Mathematics John Bird, 2007-03-14 John Bird's approach based on numerous worked examples and interactive problems is ideal for students from a wide range of academic backgrounds and can be worked through at the student's own pace. Basic mathematical theories are explained in the simplest of terms supported by practical engineering examples and applications from a wide variety of engineering disciplines to ensure the reader can relate the theory to actual engineering practice. This extensive and thorough topic coverage makes this an ideal text for a range of university degree modules: Foundation Degrees and HNC/D units. An established text which has helped many thousands of students to gain exam success, now in its fifth edition, Higher Engineering Mathematics has been further extended with new topics to maximise the book's applicability for first year engineering degree students and those following Foundation Degrees. New material includes inequalities, differentiation of parametric equations, differentiation of hyperbolic functions and homogeneous first order differential equations. This book also caters specifically for the engineering mathematics units of the Higher National Engineering schemes from Edexcel including the core unit Analytical Methods for Engineers and the two specialist units Further Analytical Methods for Engineers and Engineering Mathematics in their entirety, common to both the electrical/electronic engineering and mechanical engineering pathways. A mapping grid is included showing precisely which topics are required for the learning outcomes of each unit for ease of reference. The book is supported by a suite of free web downloads: Introductory level algebra. To enable students to revise basic algebra needed for engineering courses, available at <http://books.elsevier.com/companions/9780750681520>. Instructor's Manual. Featuring full worked solutions and mark scheme for all 19 assignments in the book and the remedial algebra assignment, available on <http://www.textbooks.elsevier.com> for lecturers only. Extensive Solutions Manual. 640 pages featuring worked solutions for 1,000 of the further problems and exercises in the book, available on <http://www.textbooks.elsevier.com> for lecturers only.

Anomalies in Net Present Value, Returns and Polynomials, and Regret Theory in Decision-Making Michael C. I. Nwogugu, 2017-06-09. This book explores why Modified Internal Rate of Return (MIRR) and Net Present Value (NPV) are not necessarily accurate or efficient tools for valuation and decision making. The author specifically addresses the biases and framing effects inherent in the NPV/MIRR/IRR model and in related approaches such as Adjusted Present Value (APV), Net Future Value (NFV) and, by extension, Polynomials. In doing so, the book presents new ways of solving higher order polynomials using invariants and homomorphisms and explains why the Fundamental Theorem of Algebra, the Binomial Theorem and the Descartes Sign Rule are unreliable. Chapters also discuss how International Asset Pricing Theory (IAPT) and Intertemporal Capital Asset Pricing

Models ICAPM can produce inaccurate results in certain circumstances The conditions under which ICAPM and IAPT may be accurate are described as well as why those conditions cannot or are unlikely to exist The conditions under which negative interest rates may exist or are justified are also outlined Moreover the author explains why traditional Consumption Savings Investment Production models of allocation can be inefficient and then introduces a new model of allocation that can be applied to individuals households and companies Finally the book explains why the Elasticity of Intertemporal Substitution is a flawed concept and introduces the Marginal Rate of Intertemporal Joint Substitution as a solution *Higher Engineering Mathematics* J.
