Paul Watzlawick's quote is one of the most important basic assumptions in the field of communication studies. There is no substitute for behavior so every kind of behavior is a type of communication. Therefore it is not possible not to communicate. Based on this fact and the further fact that every social interaction contains a type of communication it is important to find and study the areas where we can further our communication skills. Since its discovery Neuro linguistic Programming NLP can be found in nearly every western industrial country. There are many types of training and coaching available. The intention of the current seminar paper is an initial introduction to the wide field of NLP and to present some ways to improve communication skills. After a short introduction concerning the origin and development of NLP chapter 2 presents two main principles of the NLP model. Chapter 3 will provide an overview of main elements of Neuro linguistic Programming and the following chapter gives an overview of basic methods and techniques to show how you can develop your communication skills. The seminar paper will be completed with an overview of the fields of application and a r sum.

Progression and Regression in Language Kenneth Hyltenstam, Ake Viberg, 1993. First published in 1994, this crosslinguistic collection looks at changes and developments in language involving gain or loss in structural complexity or utility. The dynamics of these processes of progression and regression are examined at the societal and the individual level and the two are compared. In the former the focus is on the social and cultural forces that influence groups of speakers to create new languages or abandon old ones. In the latter the acquisition and attrition of both first and second languages are considered. Questions raised include: Can parallel structural patterning be observed in whole languages and in the individual's version of a language? Is there parallelism between progression and regression? Can changes occurring in progression and regression be interpreted in a typological framework? These are addressed from sociological, neuropsychological and linguistic perspectives.
