Academic Libraries and Public Engagement With Science and Technology Eileen Harrington, 2019-03-28 Libraries have historically played a role as a community builder providing resources and spaces where knowledge can be archived shared and created They can also play a pivotal role in fostering the public s understanding of science and scientific processes From makerspaces to data visualization labs to exhibits many libraries already delve into scientific explorations and many more could join them Scientists often need to include broader impacts goals in grant proposals but they might not know where to begin or feel that they do not have the time to devote to public engagement This is where libraries and librarians can help Research in science communication also supports tapping into libraries for public engagement with science Studies show that it is important for scientists to present findings in an apolitical way not aligning with one solution or one way of thinking and not being seen as an activist Druckman 2015 Jamieson Hardy 2014 One of the core tenets of librarians and libraries is to present information in a neutral way Research also shows that Informal conversations about science can have a greater effect on people than reading about it online or hearing about it on the news Eveland Cooper 2013 Again libraries can play a role in fostering these types of conversations Given this landscape this book will demonstrate concrete ways that libraries and librarians can play a role in fostering public engagement with science In addition to background information on the current landscape of public knowledge and understanding of science it will also include best practices and case studies of different types of programming and services that libraries can offer Often libraries do not jump to mind when people think about science education or science literacy and many librarians do not come from a science background Literature on science programming and sharing science is largely absent from the library field This book will help give confidence to librarians that they can participate in engaging the public with science At the same time it will provide a conduit to bring informal science educators

communication officers from universities or research organizations who share scientific discoveries with the public and librarians together to explore ways to align their work to promote scientific literacy for all

Parallel Processing and Applied Mathematics Roman Wyrzykowski, Jack Dongarra, Ewa Deelman, Konrad Karczewski, 2018-03-22 The two volume set LNCS 10777 and 10778 constitutes revised selected papers from the 12th International Conference on Parallel Processing and Applied Mathematics PPAM 2017 held in Lublin Poland in September 2017 The 49 regular papers presented in the proceedings were selected from 98 submissions For the workshops and special sessions that were held as integral parts of the PPAM 2017 conference a total of 51 papers was accepted from 75 submissions The papers were organized in topical sections named as follows Part I numerical algorithms and parallel scientific computing particle methods in simulations task based paradigm of parallel computing GPU computing parallel non numerical algorithms performance evaluation of parallel algorithms and applications environments and frameworks for parallel distributed cloud computing applications of parallel computing soft computing with applications and special session on parallel matrix factorizations Part II workshop on models algorithms and methodologies for hybrid parallelism in new HPC systems workshop power and energy aspects of computations PEAC 2017 workshop on scheduling for parallel computing SPC 2017 workshop on language based parallel programming models WLPP 2017 workshop on PGAS programming minisymposium on HPC applications in physical sciences minisymposium on high performance computing interval methods workshop on complex collective systems

Program Earth Jennifer Gabrys, 2016-04-13 Sensors are everywhere Small flexible economical and computationally powerful they operate ubiquitously in environments They compile massive amounts of data including information about air water and climate Never before has such a volume of environmental data been so broadly collected or so widely available Grappling with the consequences of wiring our world Program Earth examines how sensor technologies are programming our environments As Jennifer Gabrys points out sensors do not merely record information about an environment Rather they generate new environments and environmental relations At the same time they give a voice to the entities they monitor to animals plants people and inanimate objects This book looks at the ways in which sensors converge with environments to map ecological processes to track the migration of animals to check pollutants to facilitate citizen participation and to program infrastructure Through discussing particular instances where sensors are deployed for environmental study and citizen engagement across three areas of environmental sensing from wild sensing to pollution sensing and urban sensing Program Earth asks how sensor technologies specifically contribute to new environmental conditions What are the implications for wiring up environments How do sensor applications not only program environments but also program the sorts of citizens and collectives we might become Program Earth suggests that the sensor based monitoring of Earth offers the prospect of making new environments not simply as an extension of the human but rather as new technogeographies that connect technology nature and people

Convergence of Knowledge, Technology and Society Mihail C. Roco, William

S. Bainbridge, Bruce Tonn, George Whitesides, 2014-01-28 This volume aims to document the most important worldwide accomplishments in converging knowledge and technology including converging platforms methods of convergence societal implications and governance in the last ten years Convergence in knowledge technology and society is the accelerating transformative interaction among seemingly distinct scientific disciplines technologies and communities to achieve mutual compatibility synergism and integration and through this process to create added value for societal benefit It is a movement that is recognized by scientists and thought leaders around the world as having the potential to provide far reaching solutions to many of today s complex knowledge technology and human development challenges Four essential and interdependent convergence platforms of human activity are defined in the first part of this report nanotechnology biotechnology information technology and cognitive science NBIC foundational tools Earth scale environmental systems human scale activities and convergence methods for societal scale activities The report then presents the main implications of convergence for human physical potential cognition and communication productivity and societal outcomes education and physical infrastructure sustainability and innovative and responsible governance As a whole the report presents a new model for convergence To effectively take advantage of this potential a proactive governance approach is suggested The study identifies an international opportunity to develop and apply convergence for technological economic environmental and societal benefits The panel also suggests an opportunity in the United States for implementing a program aimed at focusing disparate R and D energies into a coherent activity a Societal Convergence Initiative This study received input from leading academic industry government and NGO experts from the United States Latin America Europe Asia and Australia

An Environmental History of the Civil War Judkin Browning, Timothy Silver, 2020-02-20 This sweeping new history recognizes that the Civil War was not just a military conflict but also a moment of profound transformation in Americans relationship to the natural world To be sure environmental factors such as topography and weather powerfully shaped the outcomes of battles and campaigns and the war could not have been fought without the horses cattle and other animals that were essential to both armies But here Judkin Browning and Timothy Silver weave a far richer story combining military and environmental history to forge a comprehensive new narrative of the war s significance and impact As they reveal the conflict created a new disease environment by fostering the spread of microbes among vulnerable soldiers civilians and animals led to large scale modifications of the landscape across several states sparked new thinking about the human relationship to the natural world and demanded a reckoning with disability and death on an ecological scale And as the guns fell silent the change continued Browning and Silver show how the war influenced the future of weather forecasting veterinary medicine the birth of the conservation movement and the establishment of the first national parks In considering human efforts to find military and political advantage by reshaping the natural world Browning and Silver show not only that the environment influenced the Civil War s outcome but also that the war was a watershed event in the history of the environment itself

Teaching Science in Elementary and Middle School Joseph S. Krajcik, Charlene Lochbihler Czerniak, 2007 The need for a scientifically literate population that can apply scientific ideas to solve real world problems in the 21st century has never been greater Yet a growing disconnect exists between this need and the educational capacity to prepare them The mission of Teaching Science in Elementary and Middle School A Project Based Approach 3e is to help answer this need Like its predecessors this new edition is organized around the guiding principles of problem based learning long term interdisciplinary student centered lessons that are relevant to real world issues and activities This teaching approach engages all young learners regardless of culture race or gender in exploring important and meaningful questions through a process of investigation and collaboration Throughout this dynamic process students ask questions make predictions design investigations collect and analyze data make products and share ideas Changes in this new edition include the following Stronger more explicit connections between PBS inquiry teaching and the National Science Education Standards NSES The theme of establishing the relevance of science to students lives has been expanded It now includes attention to discrepant events anchoring events and experiencing phenomena in addition to its previous focus on driving questions To help children understand that science is about explaining phenomena a new chapter Making Sense of Data now follows the one on Designing and Carrying Out Investigations It contains a section on helping children create evidence based scientific explanations A new section on the challenges of special needs and gifted students The discussion of technology in science teaching have been expanded to include such new devices as wireless handhelds cameras cell phones wikis and ipods The introductory scenarios have been reworked to insure greater relevance to elementary science teaching An accompanying Web site will offer test items and strategies to support students in problem solving and in planning and carrying out investigations This text is appropriate for anyone interested in teaching elementary or middle school science using an inquiry oriented problem based framework
