Abstract: This paper deals with development and validation of a high performance liquid chromatographic method for the quantitative determination of disodium EDTA (Ethylenediamine tetraacetic acid) in Meropenem active pharmaceutical ingredient (API). EDTA was derivatized with Ferric chloride solution by heating at 70 °C in water bath for about 20 minutes and the chromatographic separation achieved by injecting 100 µL of the derivatized mixture into a Waters HPLC system with photodiode array detector using a Phenomenex Luna C18(2) column (250 × 4.6 mm), 5 µ. The mobile phase consisting of 5% methanol and 95% of 0.7 g/L solution of Tetra butyl ammonium bromide and 4.6 g/L solution of sodium acetate trihydrate in water (pH adjusted to 4.0 with the help of acetic acid glacial) and a flow rate of 1 milliliter/minute. EDTA eluted at approximately 6 minutes. The method was suitably validated with respect to specificity, linearity of response, precision, accuracy, ruggedness, stability in analytical solution, limit of quantitation and detection and robustness for its intended use.

Recent Advances in Pharmaceutical Analysis: Applications and New Challenges for the Quality of Medicines Federica Aureli, Anna Borioni, Maria-Elisa Crestoni, Birgit Hakkarainen, Constantinos K. Zacharis, 2025-11-18 Analytical chemistry in pharmaceutical analysis deals with the investigation of bulk drug materials active pharmaceutical ingredients intermediates drug products including their impurities and degradation products to address the different qualitative and quantitative descriptors of medicines This task falls in the overarching concept of quality which is crucial to ensure that safe

and effective drugs are released to the market Analytical chemistry plays a fundamental role in supporting the thorough characterization of medicines used in the toxicological clinical studies and in the market The recent outbreak of nitrosamines impurities highlighted the challenges of measuring minute concentrations at low detection limits in complex matrices Recently several approaches have been developed to address the multifaceted features of the quality of medicines as structural analysis content impurity profile including stereochemical impurities suitability of the container closure systems and degradation patterns However new challenges continue to emerge and a number knowledge gaps are still at the forefront of the scientific and regulatory community The analytical needs are multifaceted In pharmaceutical research the characterization and monitoring of impurities including polymorphic forms stereoisomers are in focus of the quality domain being the latter difficult to address due to structural similarities with the active substance Furthermore the control of small amounts of potentially toxic impurities in finished products is often challenging and requires specific and sensitive analytical methods The application of nanotechnologies in drug development may require complementary techniques to address nanospecific issues On the regulatory side the annual marketing surveillance programmes for human and veterinary medicines entail high throughput techniques to screen the ever increasing number of samples with variable compositions The substandard production and falsification of human and veterinary medicines are still on the increase therefore fast and reliable screening tools for the unambiguous identification and quantitation of declared or undeclared active substances are necessary In all cases untargeted analytical approaches could show unexpected impurities at undue level Therefore advances in hyphenated techniques such as gas GC and liquid LC chromatography coupled to mass spectrometry MS nuclear magnetic resonance NMR Fourier transform infrared FTIR Inductively Coupled Mass Spectrometry ICP MS Raman spectroscopy to name the most common are promising areas of research The goal of this Research Topic is to explore major breakthroughs and novel applications of analytical chemistry to address new challenges and recent advances in pharmaceutical analysis Different analytical methodologies encompassing innovative and suitable chemical approaches will be gathered to support optimized sample preparation protocols detection quantification data processing and statistical analysis Special attention will be paid to inorganic and organic mass spectrometry spectroscopy e.g. NMR IR Raman and chromatography in order to build knowledge on chemical medicines peptides polysaccharides and herbal products The proposed research will have the potential to be recognized as a scientific benchmark for assessing the quality of medicines This Research Topic collection will cover chromatographic fractionation spectroscopic spectrometric omic sciences elemental analysis multivariate statistical and chemometric tools applied in the analysis of pharmaceuticals Quantitative and qualitative analyses that include sample preparation analytical instrumentation and data processing will also be considered Lastly applications to case studies and market surveillance studies are in the scope of the topic collection Biological methods are out of scope for this Research Topic We welcome Original Research Review Mini Review and Perspective articles on themes including but not limited to
