Antenna Fundamentals for Legacy Mobile Applications and Beyond Issa Elfergani, Abubakar Sadiq

Hussaini, Jonathan Rodriguez, Raed Abd-Alhameed, 2017-10-03 This book highlights technology trends and challenges that trace the evolution of antenna design starting from 3rd generation phones and moving towards the latest release of LTE A. The authors explore how the simple monopole and whip antenna from the GSM years have evolved towards what we have today an antenna design that is compact multi band in nature and caters to multiple elements on the same patch to provide high throughput connectivity. The scope of the book targets a broad range of subjects including the microstrip antenna, PIFA antenna and the monopole antenna to be used for different applications over three different mobile generations. Beyond that the authors take a step into the future and look at antenna requirements for 5G communications which already has the 5G drive in place with prominent scenarios and use cases emerging. They examine these and put in place the challenges that lie ahead for antenna design particularly in mm Wave design. The book provides a reference for practicing engineers and under post graduate students working in this field.

Superconducting Qubit Design Using Qiskit Metal Subhojit Halder, Kinjal A.

Chauhan, Muhamad Bagher Barfar, Srinjoy Ganguly, Shalini Devendrababu, 2025-08-05 Understand and implement superconducting Qubit Design using Qiskit Metal in the Quantum Computing environment. This book provides practical knowledge and step by step guidance on designing, analyzing and fabricating quantum chips. The book begins with an introduction to the fundamentals of quantum computing covering essential terms, concepts and the history of quantum computers. It explores the differences between quantum and classical computers and provides an overview of superconducting qubits. Next, you will learn the theory and practical aspects of superconducting qubits. Detailed mathematical and computational analyses of different qubit types and circuits are provided along with a comprehensive guide to creating quantum circuits using Qiskit and Qiskit Metal. You will learn to design quantum chips and analyze components such as Josephson junctions and qubit couplers using advanced methods such as the Lumped Oscillator Model, Quasi Lumped Oscillator Model and Energy Participation Ratio Method. Finally, the book covers the fabrication of superconducting qubits, detailing the manufacturing process requirements and methods to address fabrication issues. After reading this book, you will be able to advance your understanding and skills in this cutting edge field, making complex concepts accessible and providing a roadmap for practical application.

What You Will Learn

- Install the Qiskit framework for creating basic quantum computing circuits.
- Create your first superconducting qubit chip from scratch.
- Formulate the back end mathematical and computational model for the generated superconducting chips.
- Understand the Quasi LOM lumped oscillator model and how it differs from the LOM.

Who This Book Is For Quantum computing professionals working with superconducting qubits.

Electro-optical System Design, Simulation, Testing, and Training Richard M. Wasserman,Scott Lawrence DeVore,2002 The past few years have seen an upsurge in the numbers of known Neolithic settlements in Ireland Many of these sites have been excavated by archaeologists based in field units but few are well known to the wider archaeological community The papers in this volume were presented at a conference held at Queen s University Belfast in 2001 which provided a forum for a discussion of the new Neolithic material from Ireland in its wider geographical context Although the bulk of the emerging Irish settlement evidence relates to substantial houses many of these papers consider wider themes including issues of contact and communication along the sea routes and coastal margins of north west Europe questions of diversity and regional patterns of sedentism and mobility and variations in regional food production strategies

Development of Coherent Detector Technologies for Sub-Millimetre Wave Astronomy Observations Boon Kok Tan,2015-09-15 The thesis describes the development of receiver technologies for sub millimetre astronomy instruments focusing on high performance coherent cryogenic detectors operating close to the superconductor gap frequency The mixer chip which comprises the SIS devices fed by a unilateral finline and matching planar circuits was fabricated on 15 micron silicon substrate using the recently developed Silicon On Insulator SOI technology This offered broadband IF and RF performance with fully integrated on chip planar circuits resulting in an easily reproducible mixer chip and a simple mixer block An important consequence of this design is that it can be extended to the supra THz region and making the fabrication of multi pixel heterodyne arrays feasible The extension of the operation of major telescopes such as ALMA APEX and the GLT from single pixel to large format arrays is the subject of extensive research at present time since it will allow fast mapping
