Patent Office,1898 *Encyclopedia of Chemical Technology: Bearing materials to carbon* ,1992 **Organometallic Reactions and Syntheses** E. I. Becker,1977-10-01 The primary literature on organometallic chemistry has undergone phenomenal growth The number of papers published from 1951 to 1976 is about equal to all prior literature Together with this intense activity there has developed a complexity in the literature Thus specialized texts and teaching texts a review journal an advanced series and a research journal have all appeared during this period The present series also reflects this growth and recognizes that many categories of organometallic compounds now have numerous representatives in the literature The purpose of Organometallic Reactions and Syntheses is to provide complete chapters on selected categories of organometallic compounds describing the methods by which they have been synthesized and the reactions they undergo The

emphasis is on the experimental aspects although structures of compounds and mechanisms of reactions are discussed briefly and referenced. Tables of all of the compounds prepared in the category under consideration and detailed directions for specific types make these chapters particularly helpful to the preparative chemist. While the specific directions have not been referenced in the same way as are those in Organic Syntheses and Inorganic Syntheses, the personal experiences of the authors often lend special merit to the procedures and enable the reader to avoid many of the pitfalls frequently encountered in selecting an experimental procedure from the literature.
