Diagrammatic Representation and Inference Gem Stapleton, John Howse, John Lee, 2008-09-22 Diagrams is an international and interdisciplinary conference series covering all aspects of research on the theory and application of diagrams. Recent technological advances have enabled the large scale adoption of diagrams in a diverse range of areas. Increasingly sophisticated visual representations are emerging and to enable effective communication insight is required into how diagrams are used and when they are appropriate for use. The pervasive everyday use of diagrams for communicating information and ideas serves to illustrate the importance of providing a sound understanding of the role that diagrams can and do play. Research in the field of diagrams aims to improve our understanding of the role of diagrams, sketches and other visualizations in communication, computation, cognition, creative thought and problem solving. These concerns have triggered a surge of interest in the study of diagrams. The study of diagrammatic communication as a whole must be pursued as an interdisciplinary endeavour. Diagrams 2008 was the fifth event in this conference series which was launched in Edinburgh during September 2000. Diagrams attracts a large number of researchers from virtually all related fields, placing the conference as a major international event in the area. Diagrams is the only conference that provides a united forum for all areas that are concerned with the study of diagrams, for example architecture, artificial intelligence, cartography, cognitive science, computer science, education, graphic design, history of science, human computer interaction, linguistics, logic, mathematics, philosophy, psychology and software modelling. We see issues from all of these fields discussed in the papers collected in the present volume.

Cultural Domination Thomas M. Besch, Harold Kincaid, Tarun Menon, Raphael van Riel, 2024-12-10 Cultural domination has received attention inside and outside of academia but it remains under explored in recent philosophical debate. To fill this gap this book brings together ten original research contributions that engage the theme from a variety of different perspectives. They range from contributions to the philosophy of social science to advanced work in normative political philosophy. The diversity of approaches reflects the intellectual richness of the theme. Ideas of cultural domination not only raise complex conceptual and methodological questions that can challenge our understandings of domination or culture, such ideas can also play an important role both in explanations of salient social phenomena such as social structures and in an evaluation and critique of such phenomena. The diversity of styles of analysis, theoretical commitments and normative frameworks across the chapters makes this book ideal for advanced undergraduate and graduate students looking for an entry point into this complex issue as well as for scholars in philosophy, social science and cultural studies interested in the current state of the art.
