Business Process Management Martyn A. Ould, 2005 Businesses need to adapt constantly but are often held back by static IT systems The Riva approach to Business Process Management is a way of analysing the mass of concurrent collaborative activity that goes on in an organisation providing a solid basis for developing flexible IT systems that support a business

The Art of Business Process Modeling Martin Schedlbauer, 2010 Information systems have become a critical part of the infrastructure of most if not all businesses government organizations and even individual households To be useful an information system must integrate and align with the way the business conducts its operations By necessity this means that information systems construction requires an understanding of the organization s procedures operations and processes Articulating modeling and managing business processes and workflows are pre conditions to successful automation Business processes are part of the fabric of the business and represent a strategic and critical intellectual asset that needs to be understood and proactively managed Processes are often cross functional and involve multiple systems software applications and human assets including employees customers partners and vendors Processes must be formally defined and documented so that they can be practiced uniformly and consistently across the organization Explicit articulation of processes is essential so that the processes truly become intellectual property of the organization rather than being tied to a specific individual Business process modeling or BPM for short is the activity of eliciting documenting modeling and analyzing work procedures within an organization To be successful the business analyst must possess the necessary modeling skills and business knowledge to carry out these responsibilities The first step in business process management is capturing and articulating the processes This is done through process modeling Once processes have been documented then the organization can think about optimizing and eventually automating the processes Optimization is done through a combination of manual analysis as well as automated simulation This book describes the PROMAP methodology for articulating and modeling business processes PROMAP is practical and based on over 20 years of experience in modeling

Business Process Modelling Bernd Scholz-Reiter, Eberhard Stickel, 2012-12-06 Today information is considered to be a valuable company resource that has to be planned coordinated and documented Business processes need to be treated in the same way Moreover significant potential for improvement may lie in optimizing these processes As a consequence information should be collected and suitably modelled and business processes need to be analyzed and redesigned Business modelling usually deals with different views of a company The data view is concerned with information structures the functional view analyzes tasks and procedures the process view links different functions by analyzing workflows and events triggering them while the organizational view is concerned with the structure of the company under investigation These views should not however be treated in an isolated manner The key to success is to deal with the interaction between them Hence business modelling should provide an integrated view of all relevant informational functional organizational and workflow issues One of the most significant problems results from the complexity of the modelling task Modelling tools are required and are to be used in combination with other close methodologies and applications Suitable generalizations and or new methodologies need to be developed *Pragmatic Guide to Business Process Modelling* ,2009 Business Process Modeling Jason A. Beckmann, 2011 Business process modelling BPM is the activity of representing processes of an enterprise so that the current process may be analysed and improved BPM is typically performed by business analysts and managers who are seeking to improve process efficiency and quality This book presents current research in the study of business process modelling including BPM and automation with general and domain specific languages conceptualising analysing and communicating the business model and context aware methods for process modelling
