Listening to Learning Gillian Dowley McNamee, Jie-Qi Chen, 2024-03-07 Effectively assess learning in the most critical years of a child's development Young children's learning in preschool and childcare settings sets the foundation for the elementary school years to come Skills in speaking listening reading math science and the arts develop inside everyday instructional routines that teachers and childcare providers make available to children How can educators be sure of what their children are learning and how to support their progress *Listening to Learning* provides pre service and in service teachers and childcare providers working with young learners with an innovative and practical way to assess children's learning while they are engaged in daily instructional routines This book offers Methods for observing documenting and analyzing what and how young children are learning Strategies for monitoring children's progress across various areas including sciences arts mathematics language arts and play Approaches for making informed instructional adaptations that address the developmental needs of young learners from diverse home and community settings A framework that shows how instructional routine activities can be used to bridge classroom assessment with the teaching and learning process With years of expertise and a thorough analysis of assessment techniques the authors effectively showcase the power of instructional routines as a tool for understanding and enhancing student learning in these most formative years of development

SPIN Model Checking and Software Verification Klaus Havelund, John Penix, Willem Visser, 2006-12-31 The SPIN workshop is a forum for researchers interested in the subject of automata based explicit state model checking technologies for the analysis and verification of asynchronous concurrent and distributed systems The SPIN del checker <http://netlib.bell-labs.com/netlib/spin/whatispin.html> developed by Gerard Holzmann is one of the best known systems of this kind and has attracted a large user community This can likely be attributed to its efficient state exploration algorithms The fact that SPIN's modeling language Promela resembles a programming language has probably also contributed to its success Traditionally the SPIN workshops present papers on extensions and uses of SPIN As an experiment this year's workshop was broadened to have a slightly wider focus than previous workshops in that papers on software verification were encouraged Consequently a small collection of papers describe attempts to analyze and verify programs written in conventional programming languages Solutions include translations from source code to Promela as well as specially designed model checkers that accept source code We believe that this is an interesting research direction for the formal methods community and that it will result in a new set of challenges and solutions Of course abstraction becomes the key solution to deal with very large state spaces However we also see potential for integrating model checking with techniques such as static program analysis and testing Papers on these issues have therefore been included in the proceedings

to a wider range of students Weaved throughout the book are the voices of neurodiverse learners telling their own stories of math learning Through stories of real teachers recognizing the barriers in their own math classrooms and redesigning to increase access the book Reframes students with disabilities from a deficit to an asset perspective paving the way for trusting their mathematical thinking Offers equitable math instruction for all learners including those with disabilities neurodiverse students and or multilingual learners Applies UDL to the math classroom providing practical tips and techniques to support students cognitive affective and strategic development Immerses readers in math classrooms where all students are engaged in meaningful mathematics from special education day classes to inclusive general education classrooms from grades K 8 Integrates research on mathematical learning including critical math content such as developing number sense and place value fluency with math facts and operations and understanding fractions and algebraic thinking Explores critical issues such as writing IEP goals in math This book is designed for all math educators both those trained as general education teachers and those trained as special education teachers The UDL Math approach is adapted to work for all learners because everyone varies in how they perceive the world and in how they approach mathematical problem solving When we rethink mathematics to include multiple ways of being a math learner we make math accessible and engaging for a wider group of learners
