**Vertical Aeroponics System** Michelle Bates Ph D, 2020-05-22 Aeroponics like hydroponics deals with growing plants without using soil Once soil is taken from the equation all that is left is water air and nutrients The air becomes the growing medium rather than the soil It is then left to me to measure the nutrient solution or the fertilizer being mixed into the water The lid must be secure to block out all light from hitting the roots dangling inside the aeroponic system therefore the humidity will stay at 100 percent while oxygen rich nutrient solution sprays the roots all day For pretty much all of Time plants have been confined to growing in soil and therefore have had to grow horizontally roots down stems and leaves up The advent and popularization of hydroponics changed all that By isolating the nutrients and minerals from the soil and adding them directly into water plants were able to grow freely away from the ground giving rise to the practice of vertical farming By 2050 the world s population is expected to grow by another 2 billion people and feeding it will be a huge challenge Due to industrial development and urbanization we are losing arable lands every day Scientists say that the Earth has lost a third of its arable lands over the last 40 years We don t know how much more we are going to lose in the next 40 years Increasing food demand due to a growing population along with ever decreasing arable lands poses one of the greatest challenges facing us Many believe that vertical farming can be the answer to this challenge

Vertical Aeroponic Farming George D Synder, 2020-06-08 Aeroponics a great alternative for growing plants in small especially indoor Aeroponics is similar to hydroponics neither method uses liquid growth medium with hydroponics water used a growing medium In rooftop growing medium used In the different methods are used or hung in a dark chamber periodically reduced with nutrient rich solution So what's great about vertical gardening with aeroponics The form of gardening is built in a small space about 10% of the water used in traditional gardening All the water in the system is recycled there's no runoff which is why you can grow plants with much less water than traditional gardening With rooftop the plants grow much faster with NASA used that rooftop growing technology for growing plants Pest control is a lot easier as well as the plants are so healthy that pretty much most insects that would normally be found in soil aren't able to

grow them in the ground growing herbs fruits vegetables and flowers These systems can be placed in small spaces such as balconies rooftops porches and more Here is just a tiny fraction of what you will discover in this book The basis of aeroponics farming including the science behind it and how plants get nutrients in this system Why it is a better approach than anything you've ever tried before The operation cycle in an aeroponics farm The process of plant growth in the system How to plan your garden How to construct your own Aeroponics system How to light up the system How to prevent pest attack Potential problems and how to deal with them and much much more If you have a strong desire to boost your farming practice with the latest technology and achieve all that we've mentioned Scroll up and click Buy Now With 1 Click or Buy Now to get started
