## **Models With Heterogeneous Agents Introduction:**

Nonlinear Dynamical Systems in Economics Marji Lines, 2007-03-23 Many problems in theoretical economics are mathematically formalized as dynamical systems of difference and differential equations In recent years a truly open approach to studying the dynamical behavior of these models has begun to make its way into the mainstream That is economists formulate their hypotheses and study the dynamics of the resulting models rather than formulating the dynamics and studying hypotheses that could lead to models with such dynamics This is a great progress over using linear models or using nonlinear models with a linear approach or even squeezing economic models into well studied nonlinear systems from other fields There are today a number of economic journals open to publishing this type of work and some of these have become important There are several societies which have annual meetings on the subject and participation at these has been growing at a good rate And of course there are methods and techniques available to a more general audience as well as a greater availability of software for numerical and graphical analysis that makes this type of research even more exciting The lecturers for the Advanced School on Nonlinear Dynamical Systems in Economics who represent a wide selection of the research areas to which the theory has been applied agree on the importance of simulations and computer based analysis The School emphasized computer applications of models and methods and all contributors ran computer lab sessions

*Multicriteria and Multiagent Decision Making with Applications to Economics and Social Sciences* Aldo G. S. Ventre, Antonio Maturo, Šárka Hošková-Mayerová, Janusz Kacprzyk, 2013-12-06 The book provides a comprehensive and timely report on the topic of decision making and decision analysis in economics and the social sciences The various contributions included in the book selected using a peer review process present important studies and research conducted in various countries around the globe The majority of these studies are concerned with the analysis modeling and formalization of the behavior of groups or committees that are in charge of making decisions of social and economic importance Decisions in these contexts have to meet precise coherence standards and achieve a significant degree of sharing consensus and acceptance even in uncertain and fuzzy environments This necessitates the confluence of several research fields such as foundations of social choice and decision making mathematics complexity psychology sociology and economics A large spectrum of problems that may be encountered during decision making and decision analysis in the areas of economics and the social sciences together with a broad range of tools and techniques that may be used to solve those problems are presented in detail in this book making it an ideal reference work for all those interested in analyzing and implementing mathematical tools for application to relevant issues involving the economy and society **Equilibrium: Some recent types of equilibrium models** Donald Anthony Walker, 2000 Tobin-Tax and its Relevance for Financial Markets. rkten language English abstract After this brief introduction it becomes clear that the realization of a financial transaction tax would predominantly serve the goal of preventing future financial crises by reducing instability in financial markets high volatility In the following thesis the author will first set up a model displaying a financial market with two heterogeneous agents to explain to what extent their trading behaviours have an impact on the stability of the relevant market In a second step the model will be extended to two relevant markets the agents can choose to trade in and the effects of an application of a transaction tax will be depicted Due to the fact that the reaction of financial markets to a tax introduction depends on various factors the main goal of this work will be to test to what extent the market liquidity in combination with an imposed transaction tax has an impact on the price adjustment process across several periods For this reason the set up model will be programmed in mathematica where after the output will be interpreted Furthermore a possible influence of upcoming political events will be elucidated briefly before the results of the main question are stated and discussed To represent a succinct perspective there will be a brief analysis about the odds of a tax introduction and a mentioning of possible further research
