With algorithm development and real time implementation procedures, this reference is useful for those interested in power electronics for performance improvement in distributed energy resources design of advanced controllers and measurement of critical parameters surrounding renewable energy systems. By providing a complete solution for performance improvement in solar PV with novel control techniques, this book will appeal to researchers and engineers working in power electronic converters, renewable energy, and power quality. Includes simulation studies and photovoltaic performance analysis. Uses case studies as a reference for design and research. Covers different varieties of power converters from fundamentals to implementation.

Intelligent Computing Techniques for Smart Energy Systems Akhtar Kalam, Khaleequr Rehman Niazi, Amit Soni, Shahbaz Ahmed Siddiqui, Ankit Mundra, 2019-12-16 The book compiles the research works related to smart solutions concept in context to smart energy systems, maintaining electrical grid discipline and resiliency. Computational collective intelligence consisted of interaction between smart devices, smart environments, and smart interactions, as well as information technology support for such areas. It includes high quality papers presented in the International Conference on Intelligent Computing Techniques for Smart Energy Systems organized by Manipal University Jaipur. This book will motivate scholars to work in these areas. The book also prophesies their approach to be used for the business and the humanitarian technology development as research proposal to various government organizations for funding approval.

Computational Problems in Science and Engineering II Nikos E. Mastorakis, Imre J. Rudas, Yuriy S. Shmaliy, 2025-02-28 This book provides readers with modern computational techniques for solving a variety of problems from electrical, mechanical, civil, and chemical engineering. Mathematical methods are presented in a unified manner so they can be applied consistently to problems in applied electromagnetics, strength of materials, fluid mechanics, heat and mass transfer, environmental engineering, biomedical engineering, signal processing, automatic control, and more.

spacecraft hence the power converters must be designed with high power density to meet such demands To design power converters with high power density for space applications radiation hardened gallium nitride GaN semiconductor switches must be used To meet the high power requirements the photovoltaics PV powering the system must also function at its maximum power point MPP Although PV efficiency has increased over time solar irradiance and temperatures can fluctuate dramatically in deep space which causes substantial variations in the MPP of the PV array which can decrease the overall system efficiency Thus it is always imperative to track the MPP of the PV panels to maintain optimal efficiency This thesis establishes GaN as the most suitable device in DC DC converters for space applications and compares it with traditional semiconductor devices To tackle the problem of maximum power point tracking MPPT this thesis shows the development and simulation of a digital MPPT controller which employs the ripple correlation control RCC algorithm It is explained why RCC supersedes the conventional perturb and observe P the development and simulation of an analog controller is also shown This digital RCC based MPPT controller logic can be ported to any microcontroller to be used as an MPPT controller for DC DC converters with any topology The results show the efficacy of the developed MPPT controller by swiftly and precisely tracking the MPP of the PV array in rapidly changing solar irradiance conditions
