India **Multiple Abiotic Stress Tolerances in Higher Plants** N.K. Gupta,Yuri Shavrukov,R.K. Singhal,Nikolai
Borisjuk,2023-10-03 In the last 50 years classical breeding has played a significant role in achieving higher crop productivity
but major crops have reached a plateau in their yield potential Therefore the current focus for sustainable intensification of
agriculture is the use of biotechnological approaches to enhance the yield potential by combating the yield losses that occur
due to abiotic stresses The abiotic stresses are governed by multigenes and therefore a holistic approach is needed to get
success in imparting stress tolerance to enhance the yield potential of our crops Plants face multiple stress conditions during
their life stages and adopt several physiological biochemical and molecular strategies to combat that which are sometimes
not sufficient to survive particularly crop plants The climate change era has created a need to understand the abiotic stresses
in a holistic way Therefore a deep understanding of multiple abiotic stress mechanisms is necessary to develop crops tolerant
to climate fluctuation With this background the outline of this book covers the following features Agriculture sustainability
and molecular understanding of multiple stress tolerance Systems biology for life history strategies conventional and
genomic approaches above and underground Genetic resources and molecular understanding of seed priming Molecular
signaling compounds cell signal transduction and crosstalk between plant growth hormones and regulators Roles
