by Stefan

The word *ladder programming* comes from the word *Programmable Logic Controller* (PLC) by Simon, 1969. [http://www.plcopen.org](#). The first edition of the book was published in 1984, which explains why the word *controller* was present in the title. "Technological advances in recent years have resulted in the development of the programmable logic controller (PLC) and a corresponding evolution of ladder programming." (Simon, 1989). The ladder program term is from the book edition in 2000.

The idea of the book is something of a mixture between an electrical engineer or any other profession in programmable logic controllers and also at least the basis of providing support, making sure that correct work programmable logic controllers. It addresses the problem of different programming control systems being using different controllers and program from the beginning the principal structure and illustrating that with examples from a range of controllers.

In some the reader is showing the ability necessary to write programs for programmable logic controllers, some needed structure, methodology operations and guidelines are included in the book with examples on all major logic controllers and guidelines given at the end of the book.

Now, *Programmable Logic Controller* is now called as PLCs, and so, in this book is something like this chapter is included here. The access is simple. I personally have always been interested in something I learned more or less at some stage in my career. We learn in different PLC's being used by engineers control and power structures of traditional programming languages and techniques, an approach called "ladder programming" and developed. This is an approach for computerization to create programs
