Airbus A320 Ata Chapters:

Cost Engineering, 1997 Green Aviation Ramesh Agarwal, Fayette Collier, Andreas Schaefer, Allan Seabridge, 2016-09-20 Green Aviation is the first authoritative overview of both engineering and operational measures to mitigate the environmental impact of aviation. It addresses the current status of measures to reduce the environmental impact of air travel. The chapters cover such items as Engineering and technology related subjects: aerodynamics, engines, fuels, structures, etc. Operations, air traffic management, and infrastructure. Policy and regulatory aspects regarding atmospheric and noise pollution. With contributions from leading experts, this volume is intended to be a valuable addition and useful resource for aerospace manufacturers and suppliers, governmental and industrial aerospace research establishments, airline and aviation industries, university engineering and science departments, and industry analysts, consultants, and researchers.

Fundamentals of Electric Aircraft Pascal Thalin, Ravi Rajamani, Jean-Charles Mare, Sven Taubert, 2018-12-18 Fundamentals of Electric Aircraft was developed to explain what the electric aircraft stands for by offering an objective view of what can be expected from the giant strides in innovative architectures and technologies enabling aircraft electrification. Through tangible case studies, a deep insight is provided into this paradigm shift, cutting across various aircraft segments from General Aviation to Large Aircraft. Addressing design constraints and timelines foreseen to reach acceptable performance and maturity levels, Fundamentals of Electric Aircraft puts forward a general view of the progress made to date and what to expect in the years to come. Drawing from the expertise of four industry veterans: Pascal Thalin (editor), Ravi Rajamani, Jean Charles Mare, and Sven Taubert (contributors), it addresses futuristic approaches but does not depart too far from the operational down-to-earth realities of everyday business. Fundamentals of Electric Aircraft also offers analyses on how performance enhancements and fuel burn savings may bring more value for money as long as new electric technologies deliver on their promises.

Reliability and Statistics in Transportation and Communication Igor Kabashkin, Irina Yatskiv, Olegas Prentkovskis, 2020-03-28 This book reports on cutting edge theories and methods for analyzing complex systems such as transportation and communication networks and discusses multi-disciplinary approaches to dependability problems encountered when dealing with complex systems in practice. The book presents the most noteworthy methods and results discussed at the International Conference on Reliability and Statistics in Transportation and Communication (RelStat) which took place in Riga, Latvia, on October 16-19, 2019. It spans a broad spectrum of topics from mathematical models and design methodologies to software engineering, data security, and financial issues, as well as practical problems in technical systems such as transportation and telecommunications and in engineering education.
