The rate of going will depend on molecular size and concentration, and things will not necessarily be that you will have a higher rate than you will have a lower rate. A higher rate of diffusion will be observed if the concentration of the solute is higher on one side of the membrane than on the other. The following questions are to be answered by the student.

**For each of the following questions, answer the following questions:**

1. What is the purpose of the experiment? (to determine the rate of diffusion of a solute through a semi-permeable membrane)
