Industrial Revolution - Chapter 18/20 Test Study Guide

Chapter 18.5:

1. Agricultural revolution

- Most significant change occurred only in England
- Increase in food production = more farmland + increased crop yields per acre + healthier and more abundant livestock + improved climate (scientists believe "little ice age" declines, summers = more ideal growing conditions)
- Amount of land under cultivation increased by abandoning old open-field system
 - a. 1/3 of land was fallow, other had plants (issue was wasted land)
 - b. New system: 4 squares with different crops that were rotated each year to replenish soil - provided winter fodder (food) for livestock
- More livestock = increased amount of meat in EU diet, enhanced food production, more animal manure to fertilize lands and produce larger yields
- People could actually profit off of livestock now, before it was too expensive to raise
- New farming methods increased food and improved health, longer lifespan
- Urbanization of small farmers, fled to Great Britain to work in cities
- Jethro Tull - discovered using how to keep soil loose allowed air and moisture to reach plants and enabled them to grow better, used drill to plant seeds in rows instead of scatter by hand - seeds were eaten by birds
- Greater yields of vegetables - potatoes and maize (Indian corn) from Americas
 - a. Peasants could survive on them because easy to produce large quantities of, good nutrients, easily stored for winter

2. Enclosure Acts

- New agricultural techniques best for large-scale farms
- Parliament enacted legislation for agricultural lands to be enclosed
- England became land of large estates
- Small farmers had to move to city to find new industrial jobs = less farmers
- Tenant farmers worked lands
- Other parts of EU, noble privileges and heavy taxes on the peasants prevented new agricultural practices

3. New Methods of Finance

- Decline in gold and silver - new public and private banks accept paper money
