

Question number	Answer	Marks	Guidance
1 a	plastic is a poor conductor of energy (conductivity) (or is a good insulator) so the handle does not become hot when the iron is hot the base is metal because metal is a good conductor of energy (or has high thermal conductivity) and it has a low specific heat capacity so it becomes hot quickly	1 1 1	
1 b	the layers of insulation reduce energy transfer by conduction from the inside of the house to the outside so less energy from the heating system is needed to keep warm and therefore energy bills are reduced	1 1	
1 c	paper is a poor conductor of energy (or has low thermal conductivity, or is a good insulator) so it reduces energy transfer from the surroundings to the ice cream	1 1	
2 a i	conduction through plate	1	
2 a ii	radiation (and convection) through air	1	
2 b	the increase surface area of heat sink larger surface area means more energy lost due to radiation and convection from plate	1 1	
2 c	greater density of material so larger mass of heat sink for same volume greater mass and specific heat capacity of material so lower temperature increase for given amount of energy transfer copper ∴ better choice unless mass of aluminium much greater than mass of copper	1 1 1 1	
3 a	wool good insulator as fibres trap dry air which is good insulator inside of clothing becomes warm due to radiation from body body stays warm because clothing does not conduct heat energy away	1 1 1	

Question number	Answer	Marks	Guidance
3 b	in cold weather, radiation from exposed skin causes energy transfer from head hair is insulator containing trapped air so reduces energy transfer by conduction wearing hat reduces radiation from exposed parts of scalp and reduces conduction by providing extra insulation	1 1 1	
4 a	both axes correctly labelled suitable scales chosen all points correctly plotted two best fit curves drawn and labelled	1 1 1 1	
4 b	unwrapped tube: 40 to 42 s wrapped tube: 80-82 s	1 1	
4 c i	the time taken would be longer because the insulation is thicker and therefore the rate of transfer of energy from the tube would be less and the mass (or volume) of water is the same so it would cool at a slower rate	1 1 1	
4 c ii	the time taken would be less because the insulation has greater thermal conductivity so the rate of transfer of energy from the water would be greater and the mass (or volume) of water is the same so it would cool at a faster rate	1 1 1	
4 d i	the rate of cooling (or change of temperature per second) would differ if the volume had been different as the mass (or volume) of water affects the rate of cooling	1 1	
4 d ii	the rate of transfer of energy from the water depends on its temperature if the starting temperature differed, the rate of transfer of energy (or the rate of change of temperature) would differ at any given time	1 1
