

ARISTA DESIGN GUIDE

Data Center Interconnection with VXLAN

Version 1.0
November 2014

The requirement to operate multiple, geographically dispersed data centers is a fact of life for many businesses and organizations today. There are many reasons for distributing applications and data in more than one data center, such as increasing levels of service availability, improving application performance and driving operational efficiencies. Data center interconnection ensures that data is consistent, allows for the rapid movement of virtualized workloads, and facilitates the deployment of application high availability solutions between locations.

This design guide describes an Arista solution for providing simple, robust, and cost-effective data center interconnection (DCI) that enables layer-2 services to be bridged between multiple sites over existing layer-3 IP networks. This solution is completely standards-based and can be deployed over existing routed TCP/IP transport networks. Based on multi-chassis link aggregation (MLAG) and Virtual eXtensible Local Area Network (VXLAN), it provides a highly available DCI framework for linking two or more data centers. It requires no special hardware and can be deployed using any Arista switching hardware that supports VXLAN+MLAG.
