Chapter 1 (Introduction)

Exercise 1.1

Since $f(\cdot)$ is convex we have that

$$f(\lambda x + (1-\lambda)y) \leq \lambda f(x) + (1-\lambda)f(y) \,. \tag{1}$$

Since $f(\cdot)$ is concave we also have that

$$f(\lambda x + (1-\lambda)y) \geq \lambda f(x) + (1-\lambda)f(y) \,. \tag{2}$$

Combining these two expressions we have that f must satisfy each with equality or

$$f(\lambda x + (1-\lambda)y) = \lambda f(x) + (1-\lambda)f(y) \,. \tag{3}$$

This implies that f must be linear and the expression given in the book holds.

Glashoff,S.-A. Gustafson,2012-12-06 A linear optimization problem is the task of minimizing a linear real valued function of finitely many variables subject to linear con straints in general there may be infinitely many constraints This book is devoted to such problems Their mathematical properties are investi gated and algorithms for their computational solution are presented Applications are discussed in detail Linear optimization problems are encountered in many areas of appli cations They have therefore been subject to mathematical analysis for a long time We mention here only two classical topics from this area the so called uniform approximation of functions which was used as a mathematical tool by Chebyshev in 1853 when he set out to design a crane and the theory of systems of linear inequalities which has already been studied by Fourier

in 1823 We will not treat the historical development of the theory of linear optimization in detail However we point out that the decisive break through occurred in the middle of this century It was urged on by the need to solve complicated decision problems where the optimal deployment of military and civilian resources had to be determined The availability of electronic computers also played an important role The principal computational scheme for the solution of linear optimization problems the simplex algorithm was established by Dantzig about 1950 In addi tion the fundamental theorems on such problems were rapidly developed based on earlier published results on the properties of systems of linear inequalities *Linear Optimization and Duality* Craig A. Tovey,2020-12-15 Linear Optimization and Dualiyy A Modern Exposition departs from convention in significant ways Standard linear programming textbooks present the material in the order in which it was discovered Duality is treated as a difficult add on after coverage of formulation the simplex method and polyhedral theory Students end up without knowing duality in their bones This text brings in duality in Chapter 1 and carries duality all the way through the exposition Chapter 1 gives a general definition of duality that shows the dual aspects of a matrix as a column of rows and a row of columns The proof of weak duality in Chapter 2 is shown via the Lagrangian which relies on matrix duality The first three LP formulation examples in Chapter 3 are classic primal dual pairs including the diet problem and 2 person zero sum games For many engineering students optimization is their first immersion in rigorous mathematics Conventional texts assume a level of mathematical sophistication they don t have This text embeds dozens of reading tips and hundreds of answered questions to guide such students Features Emphasis on duality throughout Practical tips for modeling and computation Coverage of computational complexity and data structures Exercises and problems based on the learning theory concept of the zone of proximal development Guidance for the mathematically unsophisticated reader About the Author Craig A Tovey is a professor in the H Milton Stewart School of Industrial and Systems Engineering at Georgia Institute of Technology Dr Tovey received an AB from Harvard College an MS in computer science and a PhD in operations research from Stanford University His principal activities are in operations research and its interdisciplinary applications He received a Presidential Young Investigator Award and the Jacob Wolfowitz Prize for research in heuristics He was named an Institute Fellow at Georgia Tech and was recognized by the ACM Special Interest Group on Electronic Commerce with the Test of Time Award Dr Tovey received the 2016 Golden Goose Award for his research on bee foraging behavior leading to the development of the Honey Bee Algorithm *Linear and Nonlinear Optimization* Igor Griva,Stephen G. Nash,Ariela Sofer,2009-01-01 Provides an introduction to the applications theory and algorithms of linear and nonlinear optimization The emphasis is on practical aspects discussing modern algorithms as well as the influence of theory on the interpretation of solutions or on the design of software The book includes several examples of realistic optimization models that address important applications The succinct style of this second edition is punctuated with numerous real life examples and exercises and the authors include accessible explanations of topics that are not often mentioned in textbooks such as duality in

nonlinear optimization primal dual methods for nonlinear optimization filter methods and applications such as support vector machines The book is designed to be flexible It has a modular structure and uses consistent notation and terminology throughout It can be used in many different ways in many different courses and at many different levels of sophistication

Applied Linear Optimization Paul Herbert Randolph,Howard D. Meeks,1978 Linear Optimization W. Allen Spivey,Robert McDowell Thrall,1970 **Solution Formulas for Dynamic Linear Optimization Problems** Ronald Edward Davis,1979 Large Scale Linear and Integer Optimization: A Unified Approach Richard Kipp Martin,2012-12-06 This is a textbook about linear and integer linear optimization There is a growing need in industries such as airline trucking and financial engineering to solve very large linear and integer linear optimization problems Building these models requires uniquely trained individuals Not only must they have a thorough understanding of the theory behind mathematical programming they must have substantial knowledge of how to solve very large models in today s computing environment The major goal of the book is to develop the theory of linear and integer linear optimization in a unified manner and then demonstrate how to use this theory in a modern computing environment to solve very large real world problems After presenting introductory material in Part I Part II of this book is de voted to the theory of linear and integer linear optimization This theory is developed using two simple but unifying ideas projection and inverse projec tion Through projection we take a system of linear inequalities and replace some of the variables with additional linear inequalities Inverse projection the dual of this process involves replacing linear inequalities with additional variables Fundamental results such as weak and strong duality theorems of the alternative complementary slackness sensitivity analysis finite basis the orems etc are all explained using projection or inverse projection Indeed a unique feature of this book is that these fundamental results are developed and explained before the simplex and interior point algorithms are presented *Linear Optimization for Management* Sang M. Linear Optimization and Extensions Manfred Padberg,2013-04-17 I was pleasantly surprised when I was asked by Springer Verlag to prepare a second edition of this volume on Linear Optimization and Extensions which not exactly contrary to my personal expectations has apparently been accepted reasonably well by the global optimization community My objective in putting this book together was originally and still is to detail the major algorithmic ideas in linear optimization that have evolved in the past fifty years or so and that have changed the historical optimization landscape in substantial ways both theoretically and computationally While I may have overlooked the importance of some very recent developments the work by Farid Alizadeh which generalizes linear programming to sem i definite programming is perhaps a candidate for one of my omissions I think that major new breakthraughs on those two fronts that interest me theory and computation have not occurred since this book was published originally As a consequence I have restricted myself to a thorough re working of the original manuscript with the goal of making it more readable Of course I have taken this opportunity to correct a few Sch

nheitsfehler of the first edition and to add some illustrations The index to this volume has been extended substantially to permit a hurried reader a quicker glance at the wealth of topics that were covered nevertheless already in the first edition As was the case with the first edition Dr *A Mathematical Primer on Linear Optimization* Diogo Gomes,Amilcar Sernadas,Cristina Sernadas,2019-09-02 The book provides a self contained mathematical introduction to linear optimization for undergraduate students of Mathematics This book is equally suitable for Science Engineering and Economics students who are interested in gaining a deeper understanding of the mathematical aspects of the subject The linear optimization problem is analyzed from different perspectives topological algebraic geometrical logical and algorithmic Nevertheless no previous knowledge of these subjects is required The essential details are always provided in a special section at the end of each chapter The technical material is illustrated with multiple examples problems with fully worked solutions and a range of proposed exercises In Chapter 1 several formulations of the linear optimization problem are presented and related concerning admissible vectors and optimizers Then sufficient conditions for the existence of optimizers based on topological techniques are discussed in Chapter 2 The main objective of Chapter 3 is to provide a way for deciding whether or not an admissible vector is an optimizer relying on Farkas Lemma In Chapter 4 linear algebra is used for computing optimizers via basic admissible vectors A geometrical characterization of these vectors is the goal of Chapter 5 Duality is discussed in Chapter 6 giving yet a new technique for finding optimizers An introduction to computational complexity is presented in Chapter 7 with the aim to analyze the efficiency of linear optimization algorithms The complexity of a brute force algorithm is shown not to be polynomial Chapter 8 is targeted at the Simplex Algorithm It includes the proof of its soundness and completeness and an explanation on its non polynomial complexity Finally Chapter 9 concentrates on the integer optimization problem with an emphasis on totally unimodularity An algorithm based on the Branch and Bound Technique is analyzed **Solution Manual Linear Programming and Network Flo Ws** Bazaraa,Süleyman Tüfekçi,1977-03-01 Linear and Nonlinear Optimization Richard W.
