Local Polynomial Modelling And Its Applications:

Local Polynomial Modelling and Its Applications Jianqing Fan, 2018-05-02 Data analytic approaches to regression problems arising from many scientific disciplines are described in this book The aim of these nonparametric methods is to relax assumptions on the form of a regression function and to let data search for a suitable function that describes the data well The use of these nonparametric functions with parametric techniques can yield very powerful data analysis tools Local polynomial modeling and its applications provides an up to date picture on state of the art nonparametric regression techniques The emphasis of the book is on methodologies rather than on theory with a particular focus on applications of nonparametric techniques to various statistical problems High dimensional data analytic tools are presented and the book includes a variety of examples This will be a valuable reference for research and applied statisticians and will serve as a textbook for graduate students and others interested in nonparametric regression *Local Polynomial Modelling and Its Applications* Jianqing Fan, 1996 *Local Polynomial Modelling and its Applications* Jianqing Fan, I. Gijbels, 2013-08-21 This book is on data analytic approaches to regression problems arising from many scientific disciplines These approaches are also called nonparametric regression in the literature The aim of non parametric methods is to relax assumptions on the form of a regression function and to let data search for a suitable function that describes well the available data These approaches are powerful in exploring fine structural relationships and provide very useful diagnostic tools for parametric models Over the last two decades vast efforts have been devoted to nonparametric regression analyses This book hopes to bring an up to date picture on the state of the art of nonparametric regression techniques The emphasis of this book is on methodologies rather than on theory with a particular focus on applications of nonparametric techniques to various statistical problems These problems include least squares regression quantile and robust regression survival analysis generalized linear models and nonlinear time series Local polynomial modelling is employed in a large fraction of the book but other key ideas of nonparametric regression are also discussed **Local Polynomial Modelling and Its Applications** Jianqing Fan, Irene Gijbels, 1996-03-01 Data analytic approaches to regression problems arising from many scientific disciplines are described in this book The aim of these nonparametric methods is to relax assumptions on the form of a regression function and to let data search for a suitable function that describes the data well The use of these nonparametric functions with parametric techniques can yield very powerful data analysis tools Local polynomial modeling and its applications provides an up to date picture on state of the art nonparametric regression techniques The emphasis of the book is on methodologies rather than on theory with a particular focus on applications of nonparametric techniques to various statistical problems High dimensional data analytic tools are presented and the book includes a variety of examples This will be a valuable reference for research and applied statisticians and will serve as a textbook for graduate students and others interested in nonparametric regression *Computational Science and Its Applications - ICCSA 2008* Osvaldo Gervasi, Beniamino Murgante, Antonio

Laganà, Youngsong Mun, David Taniar, 2008-06-24 The two volume set LNCS 5072 and 5073 constitutes the refereed proceedings of the International Conference on Computational Science and Its Applications ICCSA 2008 held in Perugia Italy in June July 2008 The two volumes contain papers presenting a wealth of original research results in the field of computational science from foundational issues in computer science and mathematics to advanced applications in virtually all sciences making use of computational techniques The topics of the fully refereed papers are structured according to the five major conference themes computational methods algorithms and scientific applications high performance technical computing and networks advanced and emerging applications geometric modelling graphics and visualization as well as information systems and information technologies Moreover submissions from more than 20 workshops and technical sessions in the areas such as embedded systems geographical analysis computational geometry computational geomatics computer graphics virtual reality computer modeling computer algebra mobile communications wireless networks computational forensics data storage information security web learning software engineering computational intelligence digital security biometrics molecular structures material design ubiquitous computing symbolic computations web systems and intelligence and e education contribute to this publication
