## **Multiple Choice Questions For Engineering Ethics:**

Philosophy of Engineering, East and West Carl Mitcham, Bocong LI, Byron Newberry, Baichun ZHANG, 2018-02-06 This edited volume compares Chinese and Western experiences of engineering technology and development. In doing so it builds a bridge between the East and West and advances a dialogue in the philosophy of engineering. Divided into three parts the book starts with studies on epistemological and ontological issues with a special focus on engineering design, creativity, management, feasibility and sustainability. Part II considers relationships between the history and philosophy of engineering and includes a general argument for the necessity of dialogue between history and philosophy. It continues with a general introduction to traditional Chinese attitudes toward engineering and technology and philosophical case studies of the Chinese steel industry, railroads and cybernetics in the Soviet Union. Part III focuses on engineering ethics and society with chapters on engineering education and practice in China and the West. The book's analyses of the interactions of science, engineering, ethics, politics and policy in different societal contexts are of special interest. The volume as a whole marks a new stage in the emergence of the philosophy of engineering as a new regionalization of philosophy. This carefully edited interdisciplinary volume grew out of an international conference on the philosophy of engineering hosted by the University of the Chinese Academy of Sciences in Beijing. It includes 30 contributions by leading philosophers, social scientists and engineers from Australia, China, Europe and the United States.
