(Chapter 2) (Motion in a straight line) (Exercises) (Class 11)

Question 2.1:

In which of the following examples of motion, can the body be considered approximately a point object:

- (a) a railway carriage moving without jerks between two stations.
- (b) a monkey sitting on top of a man cycling smoothly on a circular track.
- (c) a spinning cricket ball that turns sharply on hitting the ground.
- (d) a tumbling beaker that has slipped off the edge of a table.

Answer 2.1:

(a), (b)

The size of a carriage is very small as compared to the distance between two stations. Therefore, the carriage can be treated as a point sized object.

The size of a monkey is very small as compared to the size of a circular track.

Therefore, the monkey can be considered as a point sized object on the track.

The size of a spinning cricket ball is comparable to the distance through which it turns sharply on hitting the ground. Hence, the cricket ball cannot be considered as a point object.

The size of a beaker is comparable to the height of the table from which it slipped. Hence, the beaker cannot be considered as a point object.

Question 2.2:

The position-time ($x-t$) graphs for two children A and B returning from their school O to their homes P and Q respectively are shown in Figure. Choose the correct entries in the brackets below:

- (a) (A/B) lives closer to the school than (B/A)
- (b) (A/B) starts from the school earlier than (B/A)
- (c) (A/B) walks faster than (B/A)
- (d) A and B reach home at the (same/different) time
- (e) (A/B) overtakes (B/A) on the road (once/twice).

Answer 2.2:

- (a) A lives closer to school than B.
- (b) A starts from school earlier than B.
- (c) A walks faster than A.
- (d) A and B reach home at the same time.
- (e) A overtakes A once on the road.

Explanation:

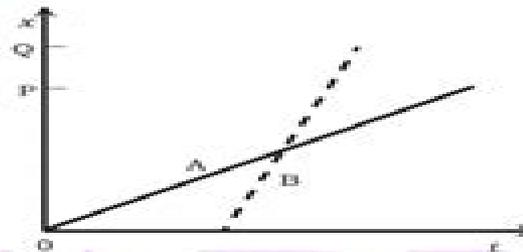

In the given $x-t$ graph, it can be observed that distance $OP < OQ$. Hence, the distance of school from the A's home is less than that from B's home.

In the given graph, it can be observed that for $x = 0, t = 0$ for A, whereas for $x = 0, t$ has some finite value for B. Thus, A starts his journey from school earlier than B.

In the given $x-t$ graph, it can be observed that the slope of B is greater than that of A. Since the slope of the $x-t$ graph gives the speed, a greater slope means that the speed of B is greater than the speed A.

It is clear from the given graph that both A and B reach their respective homes at the same time.

B moves later than A and his/her speed is greater than that of A. From the graph, it is clear that B overtakes A only once on the road.

University Physics: Australian edition Hugh D Young, Roger A Freedman, Ragbir Bhathal, 2010-08-04 This book is the product of more than half a century of leadership and innovation in physics education When the first edition of University Physics by Francis W Sears and Mark W Zemansky was published in 1949 it was revolutionary among calculus based physics textbooks in its emphasis on the fundamental principles of physics and how to apply them The success of University Physics with generations of several million students and educators around the world is a testament to the merits of this approach and to the many innovations it has introduced subsequently In preparing this First Australian SI edition our aim was to create a text that is the future of Physics Education in Australia We have further enhanced and developed University Physics to assimilate the best ideas from education research with enhanced problem solving instruction pioneering visual and conceptual pedagogy the first systematically enhanced problems and the most pedagogically proven and widely used online homework and tutorial system in the world Mastering Physics *Multidimensional NMR Methods for the Solution State* Gareth A. Morris, James W. Emsley, 2012-12-19 The content of this volume has been added to eMagRes formerly Encyclopedia of Magnetic Resonance the ultimate online resource for NMR and MRI The literature of multidimensional NMR began with the publication of three papers in 1975 then nine in 1976 and fifteen in 1977 and now contains many tens of thousands of papers Any attempt to survey the field must therefore necessarily be very selective not to say partial In assembling this handbook the Editors have sought to provide both the new researcher and the established scientist with a solid foundation for the understanding of multidimensional NMR a representative if inevitably limited survey of its applications an authoritative account of classic techniques such as COSY NOESY and TOSCY and an account of the latest progress in the development of multidimensional techniques This handbook is structured in four parts The first opens with an historical introduction to and a brief account of the practicalities and applications of multidimensional NMR methods followed by a definitive survey of their conceptual basis and a series of articles setting out the generic principles of methods for acquiring and processing multidimensional NMR data In the second part the main families of multidimensional techniques arranged in approximate order of increasing complexity are described in detail from simple J resolved spectroscopy through to the powerful heteronuclear 3D and 4D methods that now dominate the study of structural biology in solution The third part

offers and illustrative selection from the very wide range of applications of multidimensional NMR methods including some of the most recent developments in protein NMR Finally the fourth part introduces the idea of multidimensional spectra containing non frequency dimensions in which properties such as diffusion and relaxation are correlated About EMR Handbooks eMagRes Handbooks The Encyclopedia of Magnetic Resonance up to 2012 and eMagRes from 2013 onward publish a wide range of online articles on all aspects of magnetic resonance in physics chemistry biology and medicine The existence of this large number of articles written by experts in various fields is enabling the publication of a series of EMR Handbooks eMagRes Handbooks on specific areas of NMR and MRI The chapters of each of these handbooks will comprise a carefully chosen selection of articles from eMagRes In consultation with the eMagRes Editorial Board the EMR Handbooks eMagRes Handbooks are coherently planned in advance by specially selected Editors and new articles are written together with updates of some already existing articles to give appropriate complete coverage The handbooks are intended to be of value and interest to research students postdoctoral fellows and other researchers learning about the scientific area in question and undertaking relevant experiments whether in academia or industry Have the content of this Handbook and the complete content of eMagRes at your fingertips Visit www.wileyonlinelibrary.com/ref/eMagRes View other eMagRes publications here

Creative Model Construction in Scientists and Students John Clement, 2008-06-10 How do scientists use analogies and other processes to break away from old theories and generate new ones This book documents such methods through the analysis of video tapes of scientifically trained experts thinking aloud while working on unfamiliar problems Some aspects of creative scientific thinking are difficult to explain such as the power of analogies the use of physical intuition and the enigmatic ability to learn from thought experiments The book examines the hypothesis that these processes are based on imagistic mental simulation as an underlying mechanism This allows the analysis of insight Aha episodes of creative theory formation Advanced processes examined include specialized conserving transformations Gedanken experiments and adjusted levels of divergence in thinking Student interviews are used to show that students have

natural abilities for many of these basic reasoning and model construction processes and that this has important implications for expanding instructional theories of conceptual change and inquiry I regard this work as the most comprehensive account ever attempted to show how imagistic analogic and sensory motor representations participate in creative thinking Professor Ryan Tweney **University Physics** Hugh D.
