Design in Modular Construction Mark Lawson, Ray Ogden, Chris Goodier, 2014-02-25

Modular construction can dramatically improve efficiency in construction through factory production of pre engineered building units and their delivery to the site either as entire buildings or as substantial elements The required technology and application are developing rapidly but design is still in its infancy Good design requires a knowledge of modular production installation and interface issues and also an understanding of the economics and client related benefits which influence design decisions Looking at eight recent projects along with background information this guide gives you coverage of generic types of module and their application vertical loading stability and robustness dimensional and spacial planning hybrid construction cladding services and building physics fire safety and thermal and acoustic performance logistical aspects such as transport tolerances and safe installation A valuable guide for professionals and a thorough introduction for advanced students

Need For Pre Engineered Construction - A Way Forward

Dr. Harish Lal Chawla, 2025-04-24 We all know that there is a great deal of requirement of residential houses and buildings for various important activities in the educational industrial hospitality public health entertainment defense health transportation and other activities in India and abroad Ever since the human race started building shelters for protecting against the elements it has been thinking of having better materials Economy Rankings Largest countries by GDP 2022 CEOWORLD magazine We all realize that there is a big gap between the demand supply of the shelters It s a very major task to bridge this gap in the shortest possible time The Government of India and quite a few state governments are very much aware about the shortage and have embarked on various schemes in the last few decades to solve this burning problem India has been generally using age old methods of construction depending largely on traditional construction employing a large work force Some mechanization has however stepped in during the last 2 3 decades after liberalization But it is still a long way to go before we achieve our targets Even though there are currently more than 40 million construction workers available in the country one of the major issues in speedier construction is the shortage of the skilled manpower The degree of skill available is also not commensurate with the requirement Apart from the requirement of housing there is an urgent need to provide better sanitation safe potable water communications be it better road connectivity telephones railways water ways flyovers metro rail corridors ports bridges airports power supply etc There is thus a great deal of demand for construction in India This is not only for the housing sector but also for the other sectors as stated above The various five year plans starting with the first plan in 1952 had factored in the construction sector as one of the important sectors A good deal of progress has been achieved in this sector but there is still a big gap to be taken care of Construction has been one of the major requirements right since beginning of the human civilization The question uppermost in the minds of human beings right through different stages phases has been to improve on the methods materials to be used for construction Different technologies have been used during various

periods of time Need requirement is the mother of invention There is an old saying Where there is a will there is a way This is aptly fitting in here The human being has been adhering to this from times immemorial Whatever we see today is because of the ingenuity of the human mind It has been thinking of better solutions to its changing increasing requirements ever since the beginning of the human civilization Nothing can be perfect in life and this is true for the things created by the human being too So there are both plus and minus points in the technologies as well There are both advantages and disadvantages in the different technologies One has to tread very cautiously to decide between one technology and the other One has to bear in mind how and where is the balance tilting The durability strength the life of the structure the aesthetics easy maintenance cost energy efficiency the environment friendliness are some of the important few factors to decide the technology to be used for construction The new technologies like PEB PPVC can help in expediting the construction of residential and infrastructure projects However the mindset of various stakeholders has to undergo a fast change The various authorities have to wake up to the vast changes happening in the outside world The academia and the organizations working on standards and codes have must rise to the occasion in the shortest possible time frame to help the construction industry to adapt to the speedy innovations
