Detecting And Classifying Low Probability Of Intercept Radar:

Detecting and Classifying Low Probability of Intercept Radar Phillip E. Pace, 2004 Pace Naval Postgraduate School presents the principles of radar design that enable a low probability of intercept LPI by a noncooperative intercept receiver. The RF system uses complex pulse compression CW waveforms, low side lobe antennas, and power management techniques to render itself virtually undetectable. The second part of the textbook investigates three algorithms for providing the intercept receiver with a processing gain that is close to the radar's matched filter processing gain and quantifies their performance with LPI waveforms. The CD ROM contains MATLAB code for evaluating the complex LPI radar receiver interactions.

Introduction to RF Equipment and System Design Pekka Eskelinen, 2004. An excellent resource for engineers and technicians alike, this practical design guide offers a comprehensive and easy-to-understand overview of the most important aspects and components of radio frequency equipment and systems. The book applies theoretical fundamentals to real-world issues, heavily relying on examples from recent design projects. Key discussions include system design schemes, circuits, and components for system evaluations and design, RF measurement instrumentation, antennas, and associated hardware, and guidelines for purchasing test equipment. The book also serves as a valuable on-the-job training resource for sales engineers and a graduate-level text for courses in this area.

Electronic Warfare Signal Processing James Genova, 2018-01-31. Written by a prominent expert in the field, this authoritative new resource presents anti-ship missile (ASM) electronic protection (EP) techniques designed to enhance accurate target classification, currently being developed by personnel from the People's Republic of China and other nations. This book provides a comprehensive introduction to modern electronic warfare (EW) in an era of information warfare (IW). It explores the capabilities of coherent radar and digital signal processing to rapidly and accurately classify targets. Both naval and air electronic EW are covered in this resource. This book gives insight into modern EW as an information battle and includes guidance on properly testing the effectiveness of electronic attack (EA) systems. Pulsed Doppler radar basics, including electromagnetic pulse (EMP) dynamic range, gain control, and Doppler effects, are presented. A summary of the ASM sensor and EA model is provided, and readers find coverage of the radar range equation, burn-through, and the range Doppler map and imaging. Special topics: extended target classifications, including false decoys and chaff, are explained. Special topic: ASM EP waveforms and multiple receiver EP are also covered. This book explores features of algorithms to optimize combining multiple parameters and systems. Moreover, it explains several algorithms proposed by PRC personnel to implement optimal two-channel processing that mitigates cover noise EA.

Taboada,2002-09 Low probability of intercept LPI is that property of an emitter that because of its low power wide bandwidth frequency variability or other design attributes makes it difficult to be detected or identified by means of passive intercept devices such as radar warning electronic support and electronic intelligence receivers In order to detect LPI radar waveforms new signal processing techniques are required This thesis first develops a MATLAB toolbox to generate important types of LPI waveforms based on frequency and phase modulation The power spectral density and the periodic ambiguity function are examined for each waveforms These signals are then used to test a novel signal processing technique that detects the waveforms parameters and classifies the intercepted signal in various degrees of noise The technique is based on the use of parallel filter sub band arrays and higher order statistics third order cumulant estimator Each sub band signal is treated individually and is followed by the third order estimator in order to suppress any symmetrical noise that might be present The significance of this technique is that it separates the LPI waveforms in small frequency bands providing a detailed time frequency description of the unknown signal Finally the resulting output matrix is processed by a feature extraction routine to detect the waveforms parameters Identification of the

signal is based on the modulation parameters detected **Classifying Low Probability of Intercept Radar Using Fuzzy**
