Direct Methods For Sparse Linear Systems:

Direct Methods for Sparse Linear Systems Timothy A. Davis, 2006-09-01 The sparse backslash book Everything you wanted to know but never dared to ask about modern direct linear solvers Chen Greif Assistant Professor Department of Computer Science University of British Columbia Overall the book is magnificent It fills a long felt need for an accessible textbook on modern sparse direct methods Its choice of scope is excellent John Gilbert Professor Department of Computer Science University of California Santa Barbara Computational scientists often encounter problems requiring the solution of sparse systems of linear equations Attacking these problems efficiently requires an in depth knowledge of the underlying theory algorithms and data structures found in sparse matrix software libraries Here Davis presents the fundamentals of sparse matrix algorithms to provide the requisite background The book includes CSparse a concise downloadable sparse matrix package that illustrates the algorithms and theorems presented in the book and equips readers with the tools necessary to understand larger and more complex software packages With a strong emphasis on MATLAB and the C programming language Direct Methods for Sparse Linear Systems equips readers with the working knowledge required to use sparse solver packages and write code to interface applications to those packages The book also explains how MATLAB performs its sparse matrix computations Audience This invaluable book is essential to computational scientists and software developers who want to understand the theory and algorithms behind modern techniques used to solve large sparse linear systems The book also serves as an excellent practical resource for students with an interest in combinatorial scientific computing Preface Chapter 1 Introduction Chapter 2 Basic algorithms Chapter 3 Solving triangular systems Chapter 4 Cholesky factorization Chapter 5 Orthogonal methods Chapter 6 LU factorization Chapter 7 Fill reducing orderings Chapter 8 Solving sparse linear systems Chapter 9 CSparse Chapter 10 Sparse matrices in MATLAB Appendix Basics of the C programming language Bibliography Index

Iterative Methods for Sparse Linear Systems Yousef Saad, 2003-01-01 Since the first edition of this book was published in 1996 tremendous progress has been made in the scientific and engineering disciplines regarding the use of iterative methods for linear systems The size and complexity of the new generation of linear and nonlinear systems arising in typical applications has grown Solving the three dimensional models of these problems using direct solvers is no longer effective At the same time parallel computing has penetrated these application areas as it became less expensive and standardized Iterative methods are easier than direct solvers to implement on parallel computers but require approaches and solution algorithms that are different from classical methods Iterative Methods for Sparse Linear Systems Second Edition gives an in depth up to date view of practical algorithms for solving large scale linear systems of equations These equations can number in the millions and are sparse in the sense that each involves only a small number of unknowns The methods described are iterative

ie they provide sequences of approximations that will converge to the solution

Parallel Computing in Optimization A. Migdalas, Panos M. Pardalos, Sverre Storøy, 2013-12-01 During the last three decades breakthroughs in computer technology have made a tremendous impact on optimization In particular parallel computing has made it possible to solve larger and computationally more difficult problems This volume contains mainly lecture notes from a Nordic Summer School held at the Linköping Institute of Technology Sweden in August 1995 In order to make the book more complete a few authors were invited to contribute chapters that were not part of the course on this first occasion The purpose of this Nordic course in advanced studies was three fold One goal was to introduce the students to the new achievements in a new and very active field bring them close to world leading researchers and strengthen their competence in an area with internationally explosive rate of growth A second goal was to strengthen the bonds between students from different Nordic countries and to encourage collaboration and joint research ventures over the borders In this respect the course built further on the achievements of the Nordic Network in Mathematical Programming which has been running during the last three years with the support of the Nordic Council for Advanced Studies NorFA The final goal was to produce literature on the particular subject which would be available to both the participating students and to the students of the next generation

Computing ACM Special Interest Group for Algorithms and Computation Theory, 2007 Bridging the Gap Between H-Matrices and Sparse Direct Methods for the Solution of Large Linear Systems Aurélien Falco, 2019 Many physical phenomena may be studied through modeling and numerical simulations commonplace in scientific applications To be tractable on a computer appropriated discretization techniques must be considered which often lead to a set of linear equations whose features depend on the discretization techniques Among them the Finite Element Method usually leads to sparse linear systems whereas the Boundary Element Method leads to dense linear systems The size of the resulting linear systems depends on the domain where the studied physical phenomenon develops and tends to become larger and larger as the performance of the computer facilities increases For the sake of numerical robustness the solution techniques based on the factorization of the matrix associated with the linear system are the methods of choice when affordable In that respect hierarchical methods based on low rank compression have allowed a drastic reduction of the computational requirements for the solution of dense linear systems over the last two decades For sparse linear systems their application remains a challenge which has been studied by both the community of hierarchical matrices and the community of sparse matrices On the one hand the first step taken by the community of hierarchical matrices most often takes advantage of the sparsity of the problem through the use of nested dissection While this approach benefits from the hierarchical structure it is not however as efficient as sparse solvers regarding the exploitation of zeros and the structural separation of zeros from non zeros On the other hand sparse factorization is organized so as to lead to a sequence of smaller dense operations enticing sparse solvers to use this property and exploit compression techniques from hierarchical methods in order to reduce the computational cost of these elementary operations Nonetheless the globally hierarchical structure may be lost if the compression of hierarchical methods is used only locally on dense submatrices We here review the main techniques that have been employed by both those communities trying to highlight their common properties and their respective limits with a special emphasis on studies that have aimed to bridge the gap between them With these observations in mind we propose a class of hierarchical algorithms based on the symbolic analysis of the structure of the factors of a sparse matrix These algorithms rely on a symbolic information to cluster and construct a hierarchical structure coherent with the non zero pattern of the matrix Moreover the resulting hierarchical matrix relies on low rank compression for the reduction of the memory consumption of large submatrices as well as the time to solution of the solver We also compare multiple ordering techniques based on geometrical or topological properties Finally we open the discussion to a coupling between the Finite Element Method and the Boundary Element Method in a unified computational framework *Handbook of Numerical Analysis* Philippe G.
