$$(0 =) \frac{\partial v(\mathbf{x})}{\partial t} = D\Delta v(\mathbf{x}) + \rho(\mathbf{x})$$

$$\rho(\mathbf{x}) = \frac{1}{T_{MC}} \sum_i^{N_{TH}} \delta^3(\mathbf{x} - \mathbf{x}_i)$$

Boundary Condition: $v(\mathbf{x}_B) = 0$

Arrival # of particles per unit area, during T_{MC} is:

Finite Extinction Time for Non-Linear Absorption-Diffusion Equations Jacob B. Goldberg, 2002-09 In this thesis we develop a numerical method in order to approximate the solutions of one dimensional non linear absorption diffusion equations We test our method for accuracy against a linear diffusion equation with a solution that can be written in closed form We then test various types of diffusion and absorption terms to determine which ones produce extinction in finite time We also develop a numerical method to computationally solve diffusion free equations We compare the numerical

solutions of the one dimensional non linear absorption diffusion equation and the diffusion free equation and we find that for the cases tested the numerical absorption diffusion solutions are always less than the numerical diffusion free solutions Furthermore we find this is true for the cases tested when there is finite and infinite extinction time We also look at the open problem where we have slow diffusion and weak absorption but their combined effect is strong Our results provide some insight into the answer of this problem
