

CHAPTER – LEVERAGES

INTRODUCTION TO CAPITAL STRUCTURE

- Financing decision relates to the composition of relative proportion of various sources of finance. A Financial Manager compares the merits and demerits of different sources of finance while taking the financing decision.
- A business can be financed from either the shareholders' funds or borrowings from outside agencies.
- Shareholders' funds include equity share capital, preference share capital and accumulated profits. Equity has no fixed commitment regarding payment of dividend or principal amount and therefore, no risk is involved.
- Borrowings include borrowed funds like debentures and loans from financial institutions. The borrowed funds have to be paid back with interest and some amount of risk is involved if the principal and interest is not paid.
- Finally, it is the decision of the business to decide the ratio of borrowed funds and owned funds. However, most of the companies use a combination of both the shareholders' funds and borrowed funds.
- Whether the companies choose shareholders' funds or borrowed funds, each type of fund carries a cost. Borrowed funds involve interest payment whereas equities, as such do not have any fixed obligation but definitely they involve a cost. Both types of funds incur cost and this is the cost of capital to the company.

Meaning – Capital Structure refers to the mix of sources from where the long-term funds required in a business may be raised. In other words, it refers to the proportion of debt, preference capital and equity capital.

According to **Gerstenberg**, "Capital Structure of a company refers to composition or make up of its capitalization and it includes all long-term capital resources".

James C. Van Horne defines capital structure as "The mix of a firm's permanent long-term financing represented by debt, preferred stock and common stock equity".
