Elements of Environmental Chemistry Jonathan D. Raff, Ronald A. Hites, 2020-08-04 A practical approach to environmental chemistry Elements of Environmental Chemistry 3rd Edition provides readers with the fundamentals of environmental chemistry and a toolbox for putting them into practice This is a concise accessible and hands on volume designed for students and professionals working in the chemical and environmental sciences The 3rd Edition has been completely revised and rearranged The first chapter on tool skills has been expanded to include thermodynamic considerations and measurement issues The former chapter on the partitioning of organic compounds has been expanded to cover the fates of organic compounds with an emphasis on developing the readers chemical intuition for predicting a chemicals fate based on structure The material on lead mercury pesticides PCBs dioxins and flame retardants has been expanded and combined into the last chapter and supplemented with more references to the literature The problem sets have been extended and now include over 130 problems some of which can be solved using Excel

Computational Chemistry Errol G. Lewars, 2007-05-08 Computational chemistry has become extremely important in the last decade being widely used in academic and industrial research Yet there have been few books designed to teach the subject to nonspecialists

Computational Chemistry Introduction to the Theory and Applications of Molecular and Quantum Mechanics is an invaluable tool for teaching and researchers alike The book provides an overview of the field explains the basic underlying theory at a meaningful level that is not beyond beginners and it gives numerous comparisons of different methods with one another and with experiment The following concepts are illustrated and their possibilities and limitations are given potential energy surfaces simple and extended H ckel methods ab initio AM1 and related semiempirical methods density functional theory DFT Topics are placed in a historical context adding interest to them and removing much of their apparently arbitrary aspect The large number of references to all significant topics mentioned should make this book useful not only to undergraduates but also to graduate students and academic and industrial researchers

Dynamic Programming in Chemical Engineering and Process Control by Sanford M Roberts Sanford M. Roberts, 1964-01-01 In this book we study theoretical and practical aspects of computing methods for mathematical modelling of nonlinear systems A number of computing techniques are considered such as methods of operator approximation with any given accuracy operator interpolation techniques including a non Lagrange interpolation methods of system representation subject to constraints associated with concepts of causality memory and stationarity methods of system representation with an accuracy that is the best within a given class of models methods of covariance matrix estimation methods for low rank matrix approximations hybrid methods based on a combination of iterative procedures and best operator approximation and methods for information compression and filtering under condition that a filter model should satisfy restrictions associated with causality and different types of memory As a result the book represents a blend of new methods in general computational analysis and
