Cheminformatics Developments Jan H. Noordik, 2004 The developments in information technology in the last decades of the 20th century have fundamentally changed the way in which scientific information is being communicated and used A

scientific discipline where the impact of these changes has been particularly significant is bio chemistry Up to less than 25 years ago molecular modeling was a hardly existent computational chemistry niche only practiced at those few institutes that could afford the very expensive specialised hardware Also rapid access to not only the primary literature but possibly even more importantly to the factual primary data about millions of chemical compounds to reactions structures and spectra and to the genomic data of various organisms including humans can only be provided by digital storage and retrieval techniques This book seeks to document some key developments in computerized chemical information in the last two decades of the past century To put the developments into a historic perspective the three opening chapters present review articles on the founding the history and the operation of three different representative European computer chemistry institutes These introductory chapters are personal accounts of history and development and clearly show the different approaches and aims in setting up these academic research and or service facilities for computer aided chemistry and cheminformatics The following chapters form a bridge to recent cheminformatics research by covering selected topics in the fields of organic synthesis drug design crystallography modeling and chemistry teaching *Chemical Information Management* Wendy A.
