## **Practical Computing Biologists Steven Haddock:**

*Practical Computing for Biologists* Steven H.D. Haddock, Casey W. Dunn, 2011-04-22 *Practical Computing for Biologists* shows you how to use many freely available computing tools to work more powerfully and effectively. The book was born out of the authors' own experience in developing tools for their research and helping other biologists with their computational problems. Many of the techniques are relevant to molecular bioinformatics but the scope of the book is much broader, covering topics and techniques that are applicable to a range of scientific endeavours. Twenty-two chapters organized into six parts address the following topics and more: see Contents. Searching with regular expressions. The Unix command line. Python programming and debugging. Creating and editing graphics. Databases. Performing analyses on remote servers. Working with electronics. While the main narrative focuses on Mac OS X, most of the concepts and examples apply to any operating system. Where there are differences for Windows and Linux users, parallel instructions are provided in the margin and in an appendix. The book is designed to be used as a self-guided resource for researchers, a companion book in a course, or as a primary textbook. *Practical Computing for Biologists* will free you from the most frustrating and time-consuming aspects of data processing so you can focus on the pleasures of scientific inquiry.

## **Bioinformatics Data Skills** Vince Buffalo, 2015-07-01

Learn the data skills necessary for turning large sequencing datasets into reproducible and robust biological findings. With this practical guide, you'll learn how to use freely available open source tools to extract meaning from large, complex biological data sets. At no other point in human history has our ability to understand life's complexities been so dependent on our skills to work with and analyze data. This intermediate-level book teaches the general computational and data skills you need to analyze biological data. If you have experience with a scripting language like Python, you're ready to get started. Go from handling small problems with messy scripts to tackling large problems with clever methods and tools. Process bioinformatics data with powerful Unix pipelines and data tools. Learn how to use exploratory data analysis techniques in the R language. Use efficient methods to work with genomic range data and range operations. Work with common genomics data file formats like FASTA, FASTQ, SAM, and BAM. Manage your bioinformatics project with the Git version control system. Tackle tedious data processing tasks with Bash scripts and Makefiles.

*Make: Technology on Your Time Volume 27* Mark Frauenfelder, 2011-07-15. The robots are coming. *MAKE* Volume 27 shows you how to build robots that walk, fly, swim, play music, dance, and even extinguish fires. Some of the buildable bots you'll meet include Yellow Drum Machine, which roves around looking for things to drum on, then drums records and accompanies itself playing catchy rhythms; Roomba Recon, a Roomba robotic vacuum with a wireless router and webcam on its back, programmed so you can drive it around your house and see what it sees from a browser window anywhere; Hamster Powered Strandbeest, which walks around on eight legs, powered by a hamster inside its hamster-globe head. The winning project from *MAKE*'s Most Entertaining Robot contest. Tiny Robots, made from common electronics components. The special Robots section will also include a roundup of hobby robotics.

**A Voice in the Wilderness** Professor Joseph L Graves Jr., 2022-09-13  
Why understanding evolution the most reviled branch of science can help us all from fighting pandemics to undoing racism  
Evolutionary science has long been regarded as conservative a tool for enforcing regressive ideas particularly about race and gender But in A Voice in the Wilderness evolutionary biologist Joseph L Graves Jr once styled as the Black Darwin argues that his field is essential to social justice He shows for example why biological races do not exist He dismantles recent work in human biodiversity seeking genes to explain the achievements of different ethnic groups He decimates homophobia sexism and classism as well As a pioneering Black biologist a leftist and a Christian Graves uses his personal story his journey from a child of Jim Crow to a major researcher and leader of his peers to rewrite his field A Voice in the Wilderness is a powerful work of scientific anti racism and a moving account of a trailblazing life

**Using the Biological Literature** Diane Schmidt, 2014-04-14  
The biological sciences cover a broad array of literature types from younger fields like molecular biology with its reliance on recent journal articles genomic databases and protocol manuals to classic fields such as taxonomy with its scattered literature found in monographs and journals from the past three centuries Using the Biological Literature A Practical Guide Fourth Edition is an annotated guide to selected resources in the biological sciences presenting a wide ranging list of important sources This completely revised edition contains numerous new resources and descriptions of all entries including textbooks The guide emphasizes current materials in the English language and includes retrospective references for historical perspective and to provide access to the taxonomic literature It covers both print and electronic resources including monographs journals databases indexes and abstracting tools websites and associations providing users with listings of authoritative informational resources of both classical and recently published works With chapters devoted to each of the main fields in the basic biological sciences this book offers a guide to the best and most up to date resources in biology It is appropriate for anyone interested in searching the biological literature from undergraduate students to faculty researchers and librarians The guide includes a supplementary website dedicated to keeping URLs of electronic and web based resources up to date a popular feature continued from the third edition

**Research Software Engineering with Python** Damien Irving, Kate Hertweck, Luke Johnston, Joel Ostblom, Charlotte Wickham, Greg Wilson, 2021-08-05  
Writing and running software is now as much a part of science as telescopes and test tubes but most researchers are never taught how to do either well As a result it takes them longer to accomplish simple tasks than it should and it is harder for them to share their work with others than it needs to be This book introduces the concepts tools and skills that researchers need to get more done in less time and with less pain Based on the practical experiences of its authors who collectively have spent several decades teaching software skills to scientists it covers everything graduate level researchers need to automate their workflows collaborate with colleagues ensure that their results are trustworthy and publish what they have built so that

others can build on it The book assumes only a basic knowledge of Python as a starting point and shows readers how it the Unix shell Git Make and related tools can give them more time to focus on the research they actually want to do Research Software Engineering with Python can be used as the main text in a one semester course or for self guided study A running example shows how to organize a small research project step by step over a hundred exercises give readers a chance to practice these skills themselves while a glossary defining over two hundred terms will help readers find their way through the terminology All of the material can be re used under a Creative Commons license and all royalties from sales of the book will be donated to The Carpentries an organization that teaches foundational coding and data science skills to researchers worldwide
