Principles of Object-Oriented Modeling and Simulation with Modelica 2.1 Peter Fritzson,2010-08-31 Provides an introduction to modern object oriented design principles and applications for the fast growing area of modeling and simulation Covers the topic of multi domain system modeling and design with applications that have components from several areas Serves as a reference for the Modelica language as well as a comprehensive overview of application model libraries for a number of application domains

Tools and Methods for Analysis, Debugging, and Performance Improvement of Equation-Based Models Martin Sjölund,2015-05-11 Equation based object oriented EOO modeling languages such as Modelica provide a convenient declarative method for describing models of cyber physical systems Because of the ease of use of EOO languages large and complex models can be built with limited effort However current state of the art tools do not provide the user with enough information when errors appear or simulation results are wrong It is of paramount importance that such tools should give the user enough information to correct errors or understand where the problems that lead to wrong simulation results are located However understanding the model translation process of an EOO compiler is a daunting task that not only requires knowledge of the numerical algorithms that the tool executes during simulation but also the complex symbolic transformations being performed As part of this work methods have been developed and explored where the EOO tool an enhanced Modelica compiler records the transformations during the translation process in order to provide better diagnostics explanations and analysis This information is used to generate

better error messages during translation It is also used to provide better debugging for a simulation that produces unexpected results or where numerical methods fail Meeting deadlines is particularly important for real time applications It is usually essential to identify possible bottlenecks and either simplify the model or give hints to the compiler that enable it to generate faster code When profiling and measuring execution times of parts of the model the recorded information can also be used to find out why a particular system model executes slowly Combined with debugging information it is possible to find out why this system of equations is slow to solve which helps understanding what can be done to simplify the model A tool with a graphical user interface has been developed to make debugging and performance profiling easier Both debugging and profiling have been combined into a single view so that performance metrics are mapped to equations which are mapped to debugging information The algorithmic part of Modelica was extended with meta modeling constructs MetaModelica for language modeling In this context a quite general approach to debugging and compilation from extended Modelica to C code was developed That makes it possible to use the same executable format for simulation executables as for compiler bootstrapping when the compiler written in MetaModelica compiles itself Finally a method and tool prototype suitable for speeding up simulations has been developed It works by partitioning the model at appropriate places and compiling a simulation executable for a suitable parallel platform

20th ISPE International Conference on Concurrent Engineering C. Bil, J. Mo, J. Stjepandić, 2013-09-12 As a concept Concurrent Engineering CE initiates processes with the goal of improving product quality production efficiency and overall customer satisfaction Services are becoming increasingly important to the economy with more than 60% of the GDP in Japan the USA Germany and Russia deriving from service based activities The definition of a product has evolved from the manufacturing and supplying of goods only to providing goods with added value to eventually promoting a complete service business solution with support from introduction into service and from operations to decommissioning This book presents the proceedings of the 20th ISPE International Conference on Concurrent Engineering held in Melbourne Australia in September 2013 The conference had as its theme Product and Service Engineering in a Dynamic World and the papers explore research results new concepts and insights covering a number of topics including service engineering cloud computing and digital manufacturing knowledge based engineering and sustainability in concurrent engineering

Fundamentals of Agricultural and Field Robotics Manoj Karkee, Qin Zhang, 2021-07-27 Over the past century mechanization has been an important means for optimizing resource utilization improving worker health and safety and reducing labor requirements in farming while increasing productivity and quality of 4F Food Fuel Fiber Feed Recognizing this contribution agricultural mechanization was considered as one of the top ten engineering achievements of 20th century by the National Academy of Engineering Accordingly farming communities have adopted increasing level of automation and robotics to further improve the precision management of crops including input resources increase productivity and reduce farm labor beyond what has been possible with conventional mechanization

technologies It is more important than ever to continue to develop and adopt novel automation and robotic solutions into farming so that some of the most complex agricultural tasks which require huge amount of seasonal labor such as fruit and vegetable harvesting could be automated while meeting the rapidly increasing need for 4F In addition continual innovation in and adoption of agricultural automation and robotic technologies is essential to minimize the use of depleting resources including water minerals and other chemicals so that sufficient amount of safe and healthy food can be produced for current generation while not compromising the potential for the future generation This book aims at presenting the fundamental principles of various aspects of automation and robotics as they relate to production agriculture the branch of agriculture dealing with farming operations from field preparation to seeding to harvesting and field logistics The building blocks of agricultural automation and robotics that are discussed in the book include sensing and machine vision control guidance manipulation and end effector technologies The fundamentals and operating principles of these technologies are explained with examples from cutting edge research and development currently going on around the world This book brings together scientists engineers students and professionals working in these and related technologies to present their latest examples of agricultural automation and robotics research innovation and development while explaining the fundamentals of the technology The book therefore benefits those who wish to develop novel agricultural engineering solutions and or to adopt them in the future
