Speech Recognition Claudio Becchetti, Lucio Prina Ricotti, 1999-05-04 The capabilities of Automatic Speech Recognition are expanding quickly and this practical book helps engineers take advantage of the technology immediately featuring C code for implementing ASR algorithms a process for creating an interface quickly and methods for testing and developing new systems

Automatic Speech and Speaker Recognition Chin-Hui Lee, Frank K. Soong, Kuldip K. Paliwal, 2012-12-06 Research in the field of automatic speech and speaker recognition has made a number of significant advances in the last two decades influenced by advances in signal processing algorithms architectures and hardware These advances include the adoption of a statistical pattern recognition paradigm the use of the hidden Markov modeling framework to characterize both the spectral and the temporal variations in the speech signal the use of a large set of speech utterance examples from a large population of speakers to train the hidden Markov models of some fundamental speech units the organization of speech and language knowledge sources into a structural finite state network and the use of dynamic programming based heuristic search methods to find the best word sequence in the lexical network corresponding to the spoken utterance

Automatic Speech and Speaker Recognition Advanced Topics groups together in a single volume a number of important topics on speech and speaker recognition topics which are of fundamental importance but not yet covered in detail in existing textbooks Although no explicit partition is given the book is divided into five parts Chapters 1 2 are devoted to technology overviews Chapters 3 12 discuss acoustic modeling of fundamental speech units and lexical modeling of words and pronunciations Chapters 13 15 address the issues related to flexibility and robustness Chapter 16 18 concern the theoretical and practical issues of search Chapters 19 20 give two examples of algorithm and implementational aspects for recognition system realization

Advanced Algorithms and Architectures for Speech Understanding Giancarlo Pirani, 2013-11-09 This book is intended to give an overview of the major results achieved in the field of natural speech understanding inside ESPRIT Project P 26

Advanced Algorithms and Architectures for Speech and Image Processing The project began as a Pilot Project in the early stage of Phase 1 of the ESPRIT Program launched by the Commission of the European Communities After one year in the light of the preliminary results that were obtained it was confirmed for its 5 year duration Even though the activities were carried out for both speech and image understanding we preferred to focus the treatment of the book on the first area which crystallized mainly around the CSELT team with the valuable cooperation of AEG Thomson CSF and Politecnico di Torino Due to the work of the five years of the project the Consortium was able to develop an actual and complete understanding system that goes from a continuously spoken natural language sentence to its meaning and the consequent access to a database When we started in 1983 we had some expertise in small vocabulary syntax driven connected word speech recognition using Hidden Markov

Models in written natural language understanding and in hardware design mainly based upon bit slice microprocessors

Spoken Language Processing Xuedong Huang, Alejandro Acero, Hsiao-Wuen Hon, 2001 Spoken Language Processing draws on the latest advances and techniques from multiple fields computer science electrical engineering acoustics linguistics mathematics psychology and beyond Starting with the fundamentals it presents all this and more Essential background on speech production and perception probability and information theory and pattern recognition Extracting information from the speech signal useful representations and practical compression solutions Modern speech recognition techniques hidden Markov models acoustic and language modeling improving resistance to environmental noises search algorithms and large vocabulary speech recognition Text to speech analyzing documents pitch and duration controls trainable synthesis and more Spoken language understanding dialog machine

Speech Recognition Algorithms Using Weighted Finite-State Transducers Takaaki Hori, Atsushi Nakamura, 2022-05-31 This book introduces the theory algorithms and implementation techniques for efficient decoding in speech recognition mainly focusing on the Weighted Finite State Transducer WFST approach The decoding process for speech recognition is viewed as a search problem whose goal is to find a sequence of words that best matches an input speech signal Since this process becomes computationally more expensive as the system vocabulary size increases research has long been devoted to reducing the computational cost Recently the WFST

approach has become an important state of the art speech recognition technology because it offers improved decoding speed with fewer recognition errors compared with conventional methods. However, it is not easy to understand all the algorithms used in this framework and they are still in a black box for many people. In this book, we review the WFST approach and aim to provide comprehensive interpretations of WFST operations and decoding algorithms to help anyone who wants to understand, develop, and study WFST based speech recognizers. We also mention recent advances in this framework and its applications to spoken language processing.
