In December, General Motors produced 6,600 customized vans at its plant in Detroit. The labor productivity at this plant is known to have been 0.10 vans per labor-hour during that month. 300 laborers were employed at the plant that month.

**a) How many hours did the average laborer work that month?**

Output	6,600
Productivity per labor-hour	0.10
Laborers	300

Answer: 66,000 hours

6,600 vans / 0.10 vans per labor-hour = 66,000 labor-hours

**Beyond the Theory of Constraints** William A. Levinson,2019-09-16 The basic principle of the Theory of Constraints TOC is the impossibility of running a balanced factory at 100 percent capacity Variation in processing and material transfer times is the root cause of longer cycle times and higher inventories which can hinder the ability to run a factory at full capacity In Beyond the Theory of Constraints William Levinson challenges this basic principle by stating that variation in processing and material transfer times comes from special or assignable causes that can be eliminated through traditional quality management techniques Even random or common cause variation can be suppressed through lean manufacturing methods This compelling book Gives a complete overview of the Theory of Constraints and its impact on engineering and managerial economics Illustrates the effect of variation in processing and material transfer times and shows why this variation prevents achievement of 100 percent utilization Describes methods for reducing variation in processing and material transfer times Discusses methods for increasing productivity and reducing cycle times these are useful for elevating the constraint increasing its capacity and reduce variation This book will teach business executives managers and technical professionals

including quality and manufacturing engineers how to identify and remove variations and maximize capacity to achieve bottom line results
