Comprehensive Nuclear Materials, 2020-07-22 Materials in a nuclear environment are exposed to extreme conditions of
radiation temperature and or corrosion and in many cases the combination of these makes the material behavior very
different from conventional materials This is evident for the four major technological challenges the nuclear technology
domain is facing currently i long term operation of existing Generation II nuclear power plants ii the design of the next
generation reactors Generation IV iii the construction of the ITER fusion reactor in Cadarache France iv and the intermediate
and final disposal of nuclear waste In order to address these challenges engineers and designers need to know the properties
of a wide variety of materials under these conditions and to understand the underlying processes affecting changes in their
behavior in order to assess their performance and to determine the limits of operation *Comprehensive Nuclear Materials*
