*Econometrics* Badi H. Baltagi, 2022-01-27 This textbook teaches some of the basic econometric methods and the underlying assumptions behind them. It also includes a simple and concise treatment of more advanced topics in spatial correlation, panel data, limited dependent variables, regression diagnostics, specification testing, and time series analysis. Each chapter has a set of theoretical exercises as well as empirical illustrations using real economic applications. These empirical exercises usually replicate a published article using Stata, EViews, as well as SAS. This new sixth edition has been fully revised and updated and includes new material on limited dependent variables and panel data as well as revision of basic topics like heteroskedasticity, endogeneity, over-identification, and specification testing. The author also provides more exercises and empirical examples based on published economic applications.

**Heredity, Family, and Inequality** Michael Beenstock, 2012

An economist critiques nature versus nurture hypotheses from behavioral genetics, developmental psychology, sociology, and economics. Empirical literature in disciplines ranging from behavioral genetics to economics shows that in virtually every aspect of life, the outcomes of children are correlated to a greater or lesser extent with the outcomes of their parents and their siblings. In *Heredity, Family, and Inequality*, the economist Michael Beenstock offers theoretical, statistical, and methodological tools for understanding these correlations. Beenstock presents a comprehensive survey of intergenerational and sibling correlations for a broad range of outcomes including fertility and longevity, intelligence and education, income and consumption, and deviancy and religiosity. He then offers a critique of the sometimes conflicting explanations for these correlations proposed by social scientists from such disciplines as developmental psychology, sociology, and economics. Beenstock also provides an axiomatic framework for thinking about the complex interplay of heredity, family, and environments, drawing on game theory, control theory, and econometrics. Chapters 1-7 discuss such topics as the important contributions of Francis Galton (1822-1911) to the statistical study of heredity, the family as an engine of inequality, and diversity, and natural experiments designed to identify how environments, families, peer groups, and neighborhoods affect human outcomes. Chapters 8-10 present technical material on statistical, theoretical, and methodological tools used by the earlier chapters. Beenstock's goal is not to argue for either nature or nurture but to suggest more rigorous ways to assess the diverse contributions to this lively debate.
