Robot Operating System (ROS) for Absolute Beginners

Lentin Joseph, Aleena Johny, 2022

Start programming your own robots using Robot Operation System. ROS Targeted for absolute beginners in ROS Linux and Python. This guide lets you build your own robotics projects. You'll learn the basic foundation of Ubuntu Linux. Begin with the fundamentals. Installation and useful commands will give you the basic tools you need while programming a robot. Then add useful software applications that can be used while making robots. Programming robots can be done using any of the programming languages. Most popular programming languages are Python and C. You will incorporate the fundamentals of C by learning object oriented programming concepts from example and building C projects. Finally tackle an ROS hands on project to apply all the concepts of ROS you've learned. The aim of the project is to perform a dead reckoning using a cheap mobile robot. You can command your robot's position on Rviz and your robot will move to that position. Not only will you learn to program, you'll gain hands on experience working with hardware to create a real robot. You will install Ubuntu 20, install ROS Noetic, use ROS programming with roscpp and rospy. Build a mobile robot from scratch using ROS.
