Westervelt,2007-06-26 The authors present cutting edge systematic methods for achieving stable agile and efficient locomotion in bipedal machines *Self-reconfigurable Robots* Kasper Stoy,David Brandt,David J. Christensen,2010 A comprehensive survey of the growing field of self reconfigurable robots that discusses the history of the field design considerations and control strategies Self reconfigurable robots are constructed of robotic modules that can be connected in many different ways These modules move in relationship to each other which allows the robot as a whole to change shape This shapeshifting makes it possible for the robots to adapt and optimize their shapes for different tasks Thus a self reconfigurable robot can first assume the shape of a rolling track to cover distance quickly then

the shape of a snake to explore a narrow space and finally the shape of a hexapod to carry an artifact back to the starting point The field of self reconfigurable robots has seen significant progress over the last twenty years and this book collects and synthesizes existing research previously only available in widely scattered individual papers offering an accessible guide to the latest information on self reconfigurable robots for researchers and students interested in the field Self Reconfigurable Robots focuses on conveying the intuition behind the design and control of self reconfigurable robots rather than technical details Suggestions for further reading refer readers to the underlying sources of technical information The book includes descriptions of existing robots and a brief history of the field discussion of module design considerations including module geometry connector design and computing and communication infrastructure an in depth presentation of strategies for controlling self reconfiguration and locomotion and exploration of future research challenges Advances in Climbing and Walking Robots Ming Xie,2007 Robotics is an exciting field in engineering and natural sciences Robotics has already made a significant contribution to many industries with the widespread use of industrial robots for tasks such as assembly welding painting and handling materials In parallel we have witnessed the emergence of special robots which can undertake assistive jobs such as search and rescue de mining surveillance exploration and security functions Indeed the interest in mobile machines such as climbing and walking robots has broadened the scope of investigation in robotics This volume covers broad topics related to mobile machines in general and climbing and walking robots in particular Papers from the following keynote speakers are included Heinz Worn University of Karlsruhe Germany Atsuo Takanishi University of Waseda Japan John Billingsley University of Southern Queensland Australia Bryan Bridge London South Bank University UK and Neville Hogan Massachusetts Institute of Technology USA
