## **Jet Engine Test Cell:**

*Jet Engine Test Cell Noise Reduction* C. A. Kodres, 2000-08-01 Passive methods for decreasing jet engine test cell noise emissions are evaluated and compared Such methods have the dual advantages of low cost and simplicity In addition the effect on the aerothermal performance of the test cell is minimal Sound pressure levels were measured in and around test facilities equipped with various devices to further reduce noise The data were supplemented with parametric studies of noise reduction techniques conducted using a 1/20th scale physical model of the Navy's standard T 10 jet engine test cell Methods that attack the noise problem from outside and methods that attack the problem from inside the test cell are assessed including trees and other vegetation acoustic walls core busters and modifications to the exhaust stack Mounting screens in the path of the jet and increasing the height of the exhaust stack are found to be the most effective *Jet Engine Test Cells*

**Influence of Noise Control Components and Structures on Turbojet Engine Testing and Aircraft Ground Operation** Bonard E. Morse, 1962 There has been a need for summarizing and establishing adequate aerodynamic and thermodynamic design criteria for turbojet engine test cells and ground run up suppressors These criteria are discussed and their uses are illustrated by examples of typical design problem solutions The presence of noise suppression structures can have significant

influences upon the operation of the turbojet engine These influences are enumerated and evaluated with recommendations for establishing maximum acceptable effects Typical test cell configurations are presented and design criteria are established for providing noise suppression facilities which may be utilized for testing a full size aircraft or an engine by itself These facilities can be either permanent structures or portable units     **Aircraft Yearbook** ,1970     **Boeing Magazine** ,1948
