9-6 Geometric Probability

The theoretical probability of an event occurring is

$$P = \frac{\text{number of outcomes in the event}}{\text{number of outcomes in the sample space}}$$

The **geometric probability** of an event occurring is found by determining a ratio of geometric measures such as length or area. Geometric probability is used when an experiment has an infinite number of outcomes.

Finding Geometric Probability

Use Length

A point is chosen randomly on \overline{AD} . Find the probability that the point is on \overline{BD} .

$$P = \frac{\text{all points on } \overline{BD}}{\text{all points on } \overline{AD}}$$

$$= \frac{BD}{AD}$$

$$= \frac{10}{12} = \frac{5}{6}$$

Use Angle Measures

Use the spinner to find the probability of the pointer landing on the 160° space.

$$P = \frac{\text{all points in } 160^\circ \text{ region}}{\text{all points in circle}}$$

$$= \frac{160}{360}$$

$$= \frac{4}{9}$$

A point is chosen randomly on \overline{ER} . Find the probability of each event.

1. The point is on \overline{FR} .

2. The point is not on \overline{EF} .

3. The point is on \overline{EF} or \overline{GR} .

4. The point is on \overline{EG} .

Use the spinner to find the probability of each event.

5. the pointer landing on 135°

6. the pointer landing on 75°

7. the pointer landing on 90° or 75°

8. the pointer landing on 30°

learning Teaching K-6 Mathematics Douglas K. Brumbaugh, 2014-04-08 This developmentally sound research based
practical text speaks directly to preservice elementary mathematics students about the multitude of ways they can help their
future students learn to see the power beauty necessity and usefulness of mathematics in the world Part 1 deals with guiding

principles that permeate the text while Parts 2-11 deal with the specific NCTM Standards for grades K-6. Teaching K-6 Mathematics is aligned with the current NCTM Curriculum and Evaluation Standards for School Mathematics. It integrates content and methodology, emphasizes use of technology as a teaching/learning tool, stresses problem solving, provides basic information on current research in mathematics education, focuses on identification of error patterns and analysis, uses a down-to-earth, friendly writing style that engages the student rather than prescribing what to do, and includes many activities and exercises including games, tricks, and amusements that can be used in the classroom to increase student interest in mathematics. Features: Technology is integral throughout the text. Students are expected to perform Internet searches, investigate new sites appropriate for elementary students, sample new software that could be used in the classroom, and develop ways to blend calculators into the curriculum. Manipulatives are considered essential for students to learn elementary mathematics concepts. Cuisenaire rods, base 10 blocks, chips, number lines, and geoboards are all part of the manipulative landscape that is created in this text. Careful attention is given to blending rote work, developmental activities, fun application, technology, manipulatives, assessment, and planning so that prospective teachers become accustomed to using varied approaches and decision making as a curriculum is determined. Tricks, Activities, and Games (TAG) provide a wealth of ideas to attract students to learning mathematics.
