**Stirling Engine Project** Austin Eilering, Ortega. Roland, Douglas Yanagihara, 2020 For this year's Senior Project Design we will be inheriting last year's Alpha Stirling Engine with the intention of improving upon the design to have a functional prototype With that this will incorporate several design changes and different testing methods From those changes this will provide us with a baseline as far as the validity of analysis for this design With further analysis of last year's engine we noticed that it was faulty due to wrong assumptions and modelling Last year's design team modelled the engine as a single piston single cylinder engine With the two pre existing piston cylinders on their past design we believe it wasn't appropriate for their design choice This year we will pursue a different design provided by a text written by James R Senft This text will provide us with engineering drawings for a complete assembly on this type of air engine Our main objective this year is to focus less on the dynamic analysis of Stirling Engines but more on the potential applications it can be used in This report will contain our iterative process of our final design and a brief analysis on the importance of scaling these engines in size

**STIRLING ENGINES A, B, Γ, Ringbom, MANSON Engine: 18 Engines You Can Build** Giampaolo Fortuzzi, 2020-06-22

This book provides invaluable and detailed information on building and optimizing Stirling engines It's clear organization and the clarity of explanations and instructions have made the original Italian language version of this book a huge success with Stirling Engine enthusiasts All 260 pages are printed entirely in color and contain a large number of photos and illustrations 18 of the authors miniature engines are presented each with a technical description geometric characteristics and performance data photos and engine technical data sheets Excel files for the necessary calculations can be obtained free of charge by sending an e mail to the author These were created by the author for each type of engines namely Stirling Alpha Beta range engines Ringbom vertical and horizontal cylinder and Manson These make it easy to both design an engine and optimize it these calculations include all engine volumes both functional and dead The text is organized so it can be understood by readers with varying degrees of knowledge to facilitate reading we have grouped the mathematical notes that are not essential for initial understanding at the end of the relevant chapters The basic thermodynamic concepts are explained in these notes The text concerns two

engines types the Stirling including the Ringbom model which is the best known and the Manson sometimes called the Ruppel engine There are similarities between the two theoretical cycles used in each in one respect however they differ considerably the cycle used in a Stirling engine produces mechanical energy by utilizing a gas that is hermetically sealed inside in fact the seal is not perfect some inevitable minor losses occur In contrast the Manson is not a closed cycle The engine that uses the Stirling cycle can be made in three configurations generally called Alfa Beta Gamma in addition to a fourth the Ringbom type in which the displacer is free i e not connected to the crank mechanism An important consideration for the Beta and Gamma types is the optimization of output power by establishing the correct ratio between the volume of the displacer and the volume of the working cylinder factoring different temperatures Efficiency is calculated and examined The book begins with the Gamma type which is the easiest to understand then the remaining Alfa Beta and Ringbom types the latter a free piston engine and concludes with the Manson type
