Powertrain Systems for Net-Zero Transport Institution of Mechanical Engineers (IME), 2021-12-23 The transport sector continues to shift towards alternative powertrains particularly with the UK Government's announcement to end the sale of petrol and diesel passenger cars by 2030 and increasing support for alternatives Despite this announcement the internal combustion continues to play a significant role both in the passenger car market through the use of hybrids and sustainable low carbon fuels as well as a key role in other sectors such as heavy duty vehicles and off highway applications across the globe Building on the industry leading IC Engines conference the 2021 Powertrain Systems for Net Zero Transport conference 7-8 December 2021 London UK focussed on the internal combustion engine's role in Net Zero transport as well as covered developments in the wide range of propulsion systems available electric fuel cell sustainable fuels etc and their associated powertrains To achieve the net zero transport across the globe the life cycle analysis of future powertrain and energy was also discussed Powertrain Systems for Net Zero Transport provided a forum for engine fuels e machine fuel cell and powertrain experts to look closely at developments in powertrain technology required to meet the demands of the net zero future and global competition in all sectors of the road transportation off highway and stationary power industries

Vehicle Powertrain Systems Behrooz Mashadi, David Crolla, 2011-12-30 Vehicle Powertrain Systems The powertrain is at the heart of vehicle design the engine whether it is a conventional hybrid or electric design provides the motive power which is then managed and controlled through the transmission and final drive components The overall powertrain system therefore defines the dynamic performance and character of the vehicle The design of the powertrain has conventionally been tackled by analyzing each of the subsystems individually and the individual components for example engine transmission and driveline have received considerable attention in textbooks over the past decades The key theme of this book is to take a systems approach to look at the integration of the components so that the whole powertrain system meets the demands of overall energy efficiency and good drivability Vehicle Powertrain Systems provides a thorough description and analysis of all the powertrain components and then treats them together so that the overall performance of the vehicle can be understood and calculated The text is well supported by practical problems and worked examples Extensive use is

made of the MATLAB software and many example programmes for vehicle calculations are provided in the text Key features
Structured approach to explaining the fundamentals of powertrain engineering Integration of powertrain components into
overall vehicle design Emphasis on practical vehicle design issues Extensive use of practical problems and worked examples
Provision of MATLAB programmes for the reader to use in vehicle performance calculations This comprehensive and
integrated analysis of vehicle powertrain engineering provides an invaluable resource for undergraduate and postgraduate
automotive engineering students and is a useful reference for practicing engineers in the vehicle industry
