Applied Semantics Gilles Barthe, Peter Dybjer, Luis Pinto, João Saraiva, 2003-08-02 This book is based on material presented at the international summer school on Applied Semantics that took place in Caminha Portugal in September 2000 We aim to present some recent developments in programming language research both in semantic theory and in implementation in a series of graduate level lectures The school was sponsored by the ESPRIT Working Group 26142 on Applied Semantics APPSEM which operated between April 1998 and March 2002 The purpose of this working group was to bring together leading reseachers both in semantic theory and in implementation with the speci c aim of improving the communication between theoreticians and practitioners

The activities of APPSEM were restructured into nine interdisciplinary themes: A Semantics for object oriented programming B Program structuring C Integration of functional languages and proof assistants D Verification methods E Automatic program transformation F Games sequentiality and abstract machines G Types and type inference in programming H Semantics based optimization I Domain theory and real number computation. These themes were identified as promising for profitable interaction between semantic theory and practice and were chosen to contribute to the following general topics: description of existing programming language features, design of new programming language features, implementation and analysis of programming languages, transformation and generation of programs, verification of programs. The chapters in this volume give examples of recent developments covering a broad range of topics of interest to APPSEM.

Practical Aspects of Declarative Languages Bharat Jayaraman, 2004-06-14. This book constitutes the refereed proceedings of the 6th International Symposium on Practical Aspects of Declarative Languages PADL 2004 held in Dallas Texas USA in June 2004. The 15 revised full papers presented together with 2 invited papers were carefully reviewed and selected for presentation. All current aspects of declarative programming are addressed.

Implementation and Application of Functional Languages Andrew Butterfield, Clemens Grelck, Frank Huch, 2007-01-20. This book constitutes the thoroughly refereed post proceedings of the 17th International Workshop on Implementation and Applications of Functional Languages IFL 2005 held in Dublin Ireland in September 2005. Ranging from theoretical and methodological topics to implementation issues and applications in various contexts, the papers address all current issues on functional and function based languages.

Mathematics of Program Construction Dexter Kozen, Carron Shankland, 2004-06-24. This book constitutes the refereed proceedings of the 7th International Conference on the Mathematics of Program Construction MPC 2004 held in Stirling Scotland UK in July 2004. The 19 revised full papers presented were carefully reviewed and selected from 37 submissions. Among the topics addressed are programming theory, programming methodology, program specification, program transformation, programming paradigms, programming calculi and programming language semantics.

Programming in Haskell Graham Hutton, 2016-09-01. Haskell is a purely functional language that allows programmers to rapidly develop clear, concise and correct software. The language has grown in popularity in recent years both in teaching and in industry. This book is based on the author's experience of teaching Haskell for more than twenty years. All concepts are explained from first principles and no programming experience is required, making this book accessible to a broad spectrum of readers. While Part I focuses on basic concepts, Part II introduces the reader to more advanced topics. This new edition has been extensively updated and expanded to include recent and more advanced features of Haskell, new examples and exercises, selected solutions and freely downloadable lecture slides and example code. The presentation is clean and simple while also being fully compliant with the latest version of the language, including recent changes concerning applicative monadic foldable and traversable types.
