

## Chapter 8 Free Response Review

1. National Fuelsaver Corporation manufactures the Platinum Gasaver, a device the claim “may increase gas mileage by 22%.” Here are the percent changes in gas mileage for 15 identical vehicles, as presented in one of the company’s advertisements:

48.3   46.9   46.8   44.6   40.2   38.5   34.6   33.7   28.7   28.7   24.8   10.8   10.4  
6.9   -12.4

Construct and interpret a 90% confidence interval to estimate the mean fuel savings in the population of all such vehicles.

2. A New York Times poll on women’s issues interviewed 1025 women randomly selected from the United States, excluding Alaska and Hawaii. The poll found that 47% of the women said they do not get enough time for themselves. Construct and interpret a 95% confidence interval that estimates the proportion of women in the United States who do not feel that they get enough time for themselves. Use the four-step process.

3. Considerable research is being done in bioremediation—the use of living organisms to clean up pollution. In a recently conducted experiment, researchers used fungi to degrade hydrocarbons, the by-products of incomplete combustion of fossil fuels. These by-products can cause cancer, and their accumulation in water and soil poses an environmental hazard.

In order to be cost-effective, the rate at which a particular hydrocarbon is degraded must be at least 1.00 micromole per gram of soil per minute. The researchers added fungi and growth media (essentially sugar) to the soil in 9 containers with random samples of soil and obtained the following degradation rates in micromoles per gram per minute.

0.83	0.91	1.00
1.08	1.08	1.09
1.10	1.23	1.36

Construct and interpret a 90% confidence interval for the mean degradation rate. Can the researchers be confident that this process will be cost-effective? Use the four-step process. Hint: you are going to either need to use your graphing calculator or stapplet to generate an appropriate graph of this data – histogram, dotplot, or boxplot
