Monografie Matematyczne, 1932      **Monografie Matematyczne** Mirosław Krzyżański, 1932      *Partial Differential Equations of Second Order* Mirosław Krzyżański, 1971      **Recent Developments in Fractional Calculus: Theory, Applications, and Numerical Simulations** Lakhveer Kaur, Pushpendra Kumar, 2025-05-30 This book discusses recent developments in fractional calculus and fractional differential equations in a very elaborative manner and is of interest to research scholars academicians and scientists who want to enhance the knowledge in the context of new insights and mathematical ideas in fractional calculus and its emerging applications in various fields It focuses on strengthening the existing results along with identifying the practical challenges encountered The purpose of this collection is to provide comprehension of articles that reflect recent mathematical results as well as some results in applied sciences untouched by the tools and techniques of fractional calculus along with their modelling and computation having applications in diverse arenas      *Evolutionary Equations with Applications in Natural Sciences* Jacek Banasiak, Mustapha Mokhtar-Kharroubi, 2014-11-07 With the unifying theme of abstract evolutionary equations both linear and nonlinear in a complex environment the book presents a multidisciplinary blend of topics spanning the fields of theoretical and applied functional analysis partial differential equations probability theory and numerical analysis applied to various models coming from theoretical physics biology engineering and complexity theory Truly unique features of the book are the first simultaneous presentation of two complementary approaches to fragmentation and coagulation problems by weak compactness methods and by using semigroup techniques comprehensive exposition of probabilistic methods of analysis of long term dynamics of dynamical systems semigroup analysis of biological problems and cutting edge pattern formation theory The book will appeal to postgraduate students and researchers specializing in applications of mathematics to problems arising in natural sciences and engineering      *Computational Bodily Fluid Dynamics* Eleuterio F. Toro, 2025-09-25 This book provides fundamental information on all aspects of computational haemodynamics in an integrated manner combining physiology fluid mechanics differential equations and related numerical methods computing experiments and cardiovascular pathologies Further it demonstrates how to develop mathematical models for blood and other physiological fluids such as cerebrospinal fluid all in the context of research on cardiovascular and neurodegenerative diseases The book is based on two Master s courses and a PhD Winter School course taught at the University of Trento Italy Its target audience includes Master s students and PhD researchers in engineering mathematics computer science and medicine but it will also benefit medical professionals researchers and academics      Proceedings United States. National Congress of Applied Mechanics, 1962      **Proceedings**, 1962      **Selected Papers of F.W.J. Olver** Frank W. J. Olver, 2000      **Transient Techniques in Electrochemistry** Digby Macdonald, 2012-12-06 The study of electrochemical reactions by relaxation or transient techniques has expanded rapidly over the last two decades The impetus for the development of these techniques

has been the desire to obtain quantitative data on the rates of fast electrochemical processes including those coupled to homogeneous chemical reactions in solution This has necessarily meant the development of techniques that are capable of delineating the effects of mass transport and charge transfer at very short times The purpose of this book is to describe how the various transient techniques may be used to obtain the desired information Emphasis is placed upon the detailed mathematical development of the subject since this aspect is the most frequently ignored in other texts in this field In any relaxation or transient technique for the study of rate processes it is necessary to disturb the reaction from equilibrium or the steady state by applying a perturbing impulse to the system The system is then allowed to relax to a new equilibrium or steady state position and the transient i e the response as a function of time is analyzed to extract the desired kinetic information In electrochemical studies the heterogeneous rate constants are in general dependent upon the potential difference across the interface so that the perturbing impulse frequently takes the form of a known variation in potential as a function of time

**Robust Engineering Designs of Partial Differential Systems and Their Applications** Bor-Sen Chen,2021-12-22 Most systems in science engineering and biology are of partial differential systems PDSs modeled by partial differential equations Many books about partial differential equations have been written by mathematicians and mainly address some fundamental mathematic backgrounds and discuss some mathematic properties of partial differential equations Only a few books on PDSs have been written by engineers however these books have focused mainly on the theoretical stabilization analysis of PDSs especially mechanical systems This book investigates both robust stabilization control design and robust filter design and reference tracking control design in mechanical signal processing and control systems to fill a gap in the study of PDSs Robust Engineering Designs of Partial Differential Systems and Their Applications offers some fundamental background in the first two chapters The rest of the chapters focus on a specific design topic with a corresponding deep investigation into robust H filtering stabilization or tracking design for more complex and practical PDSs under stochastic fluctuation and external disturbance This book is aimed at engineers and scientists and addresses the gap between the theoretical stabilization results of PDSs in academic and practical engineering designs more focused on the robust H filtering stabilization and tracking control problems of linear and nonlinear PDSs under intrinsic random fluctuation and external disturbance in industrial applications Part I provides backgrounds on PDSs such as Galerkin s and finite difference methods to approximate PDSs and a fuzzy method to approximate nonlinear PDSs Part II examines robust H filter designs for the robust state estimation of linear and nonlinear stochastic PDSs And Part III treats robust H stabilization and tracking control designs of linear and nonlinear PDSs Every chapter focuses on an engineering design topic with both theoretical design analysis and practical design examples

Algebraic Manipulation,1974      Nonlinear Partial Differential Equations and Free Boundaries: Elliptic equations J. I. Díaz,1985 In this Research Note the author brings together the body of known work and presents many recent results relating to nonlinear partial differential equations that give rise to a free boundary usually the boundary of the set where the solution vanishes identically The formation of such a boundary depends on an adequate balance between two of the terms of the equation that represent the particular characteristics of the phenomenon under consideration diffusion absorption convection evolution etc These balances do not occur in the case of a linear equation or an arbitrary nonlinear equation Their characterization is studied for several classes of nonlinear equations relating to applications such as chemical reactions non Newtonian fluids flow through porous media and biological populations In this first volume the free boundary for nonlinear elliptic equations is discussed A second volume dealing with parabolic and hyperbolic equations is in preparation      *Applied and Industrial Mathematics in Italy II* Vincenzo Cutello,Giorgio Fotia,Luigia Puccio,2007 Industrial mathematics is evolving into an important branch of mathematics Mathematicians in particular in Italy are becoming increasingly aware of this new trend and are engaged in bridging the gap between highly specialized mathematical research and the emerging demand for innovation from industry The contributions in this volume provide both R D workers in industry with a general view of existing skills and academics with state of the art applications of mathematics to real world problems which may also be incorporated in advanced courses      *Choice* ,1998      *The Matrix and Tensor Quarterly* ,1957      **Applied And Industrial Mathematics In Italy Ii - Selected Contributions From The 8th Simai Conference** Vincenzo Cutello,Giorgio Fotia,Luigia Puccio,2007-08-17 Industrial mathematics is evolving into an important branch of mathematics Mathematicians in particular in Italy are becoming increasingly aware of this new trend and are engaged in bridging the gap between highly specialized mathematical research and the emerging demand for innovation from industry The contributions in this volume provide both R D workers in industry with a general view of existing skills and academics with state of the art applications of mathematics to real world problems which may also be incorporated in advanced courses      *Mechanics and Chemistry of Solid Propellents* A.
