Regulating AI Shreyas Parab, Mikey Fischer, Gpt 3, 2021-02-11 Until somewhat recently AI was mostly an academic pursuit that always seemed far away from being released outside of academia Today however AI is touching almost every aspect of human life As such there are several emerging legal and policy questions that society will need to reckon with Although we are faced with new challenges we have many opportunities to utilize true and tested frameworks and legal infrastructure that has been centuries in the making This book tries to bring together two disparate fields law and technology and give the reader and understanding of their convergence and divergence We start to answer many of these questions or at least open the discussion that acknowledges its complexity This is an exploration of those questions and where possible we try to go over information that might be helpful in appreciating the depth of those questions As technology and law are two large subjects that span a wide range we do our best to narrow the scope of the chapters as best we can This book should not be taken as original research in that we hypothesize how the legal system should change or what the answers to these questions are We instead look at the underlying logic that is provided within current legal frameworks to see how they can be adapted to fit current AI and future generations of much more powerful AI Just as this is an emerging field we are emerging researchers interested in starting to put pen to paper on the kind of questions we will spend our lifetimes pursuing In the last chapter we ask AI to make some forward looking projections about how it sees AI and law intersecting in the future In summary this book is not intended to

convey original research or ideas about how AI and the law should interact in the future It is not formal academic research but rather thoughts ideas and frameworks that two students wanted to compile based on classwork across Stanford and externally **First International Conference on Artificial Intelligence Applications on Wall Street** ,1991

Proceedings 1985 Frontiers in Education Conference Lawrence P. Grayson,Joseph M.
