Selected Exercises in Algebra Rocco Chirivì, Ilaria Del Corso, Roberto Dvornicich, 2022-11-28 This book the second of two volumes contains approximately 350 exercises in Algebra which have featured exam questions for the Algebraic Structure and Algebra I courses taught by the authors at the University of Pisa Each exercise is presented together with one or more solutions carefully written with consistent language and notation A distinguishing feature of this book is the fact that each exercise is unique and requires some creative thinking to be solved The themes covered in this volume are group theory and Sylow theorems commutative rings with an emphasis on unique factorisation Gaussian integers field extensions and Galois theory The book includes a detailed section recalling relevant theory that can be used as a reference for study and revision A list of preliminary exercises introduces the main techniques to be applied in solving the proposed exam questions This volume is aimed at second year students in Mathematics and Computer science

(m)KdV Solitons on the Background of Quasi-Periodic Finite-Gap Solutions Fritz Gesztesy, Roman Svirsky, 1995 In the introductory section we review the formulation of the Korteweg de Vries KdV equation and of the modified KdV mKdV equation as a compatibility condition for a Lax pair of linear operators We then illustrate Miura's transformation which maps solutions of the mKdV into solutions of the KdV We then give a general overview of the concept of soliton solutions relative to general backgrounds and of the single and double commutation methods Finally we present the main results of the article To avoid the clutter of too many technical details the paper is organized in four sections and five appendices

99 Variations on a Proof Philip Ording, 2021-10-19 An exploration of mathematical style through 99 different proofs of the same theorem This book offers a multifaceted perspective on mathematics by demonstrating 99 different proofs of the same theorem Each chapter solves an otherwise unremarkable equation in distinct historical formal and imaginative styles that range from Medieval Topological and Doggerel to Chromatic Electrostatic and Psychedelic With a rare blend of humor and scholarly aplomb Philip Ording weaves these variations into an accessible and wide ranging narrative on the nature and practice of mathematics Inspired by the experiments of the Paris based writing group known as the Oulipo whose members included Raymond Queneau Italo Calvino and Marcel Duchamp Ording explores new ways to examine the aesthetic possibilities of mathematical activity 99 Variations on a Proof is a mathematical take on Queneau's Exercises in Style a collection of 99 retellings of the same story and it draws unexpected connections to everything from mysticism and technology to architecture and sign language Through diagrams found material and other imagery Ording illustrates the flexibility and creative potential of mathematics despite its reputation for precision and rigor Readers will gain not only a bird's eye view of the discipline and its major branches but also new insights into its historical philosophical and cultural nuances Readers no matter their level of expertise will discover in these proofs and accompanying commentary surprising new aspects of the mathematical landscape
