Gribov-90 Memorial Volume: Field Theory, Symmetry, And Related Topics - Proceedings Of The Memorial Workshop Devoted To The 90th Birthday Of V N Gribov Yuri L Dokshitzer, Peter Levai, Arpad Lukacs, Julia Nyiri, 2021-04-20 Vladimir Naumovich Gribov is one of the creators of modern theoretical physics. The concepts and methods that Gribov has developed in the second half of the 20th century became cornerstones of the physics of high energy hadron interactions, relativistic theory of complex angular momenta, a notion of the vacuum pole Pomeron, effective reggeon field theory, condensed matter physics, critical phenomena, neutrino oscillations, and nuclear physics. His unmatched insights into the nature of the quantum field theory helped to elucidate, in particular, the origin of classical solutions, instantons, quantum anomalies, specific problems in quantization of non-Abelian fields, Gribov anomalies, Gribov horizon, and the role of light quarks in the color confinement phenomenon. The Memorial Workshop devoted to Gribov's 90th birthday was cancelled due to the coronavirus pandemic in 2020; however, this did not deter the collection of many new studies in challenging theoretical physics problems across a broad variety of topics and shared memories about their colleague, great teacher, and friend. The contributions of this memorial volume affirm the everlasting impact of Gribov's scientific heritage upon the physics of the 21st century.
