Introduction To Optics:

Introduction to Optics Frank L. Pedrotti, Leno M. Pedrotti, Leno S. Pedrotti, 2018 A comprehensive and engaging textbook covering the main areas of optics and its modern applications *Introduction to Optics* Germain Chartier, 2005-12-05 Choice Outstanding Title January 2006 Since the discovery of the lasers in 1960 and optical fibers in 1970 optics underwent deep changes which accentuated its multi field character This work covers essential concepts of comprehension and reports the great progress of current knowledge in optics The method of presentation is inspired by Richard Feynman with an emphasis on telling optics rather than deducing it from fundamental laws For its excellent teaching style the book received the Arnulf Francon Award by the French Optical Society The concepts are formulated in a way such that the necessary mathematical tools do not hinder comprehension of the phenomena Global in vision the book can also be used as a reference In addition to the traditional aspects of optics it includes the tools and methods currently used by researchers and engineers as well as explanation and implications of the most recent developments **Introduction to Optics** Frank L. Pedrotti, Leno M. Pedrotti, Leno S. Pedrotti, 2017-12-21 *Introduction to Optics* is now available in a re issued edition from Cambridge University Press Designed to offer a comprehensive and engaging introduction to intermediate and upper level undergraduate physics and engineering students this text also allows instructors to select specialized content to suit individual curricular needs and goals Specific features of the text in terms of coverage beyond traditional areas include extensive use of matrices in dealing with ray tracing polarization and multiple thin film interference three chapters devoted to lasers a separate chapter on the optics of the eye and individual chapters on holography coherence fiber optics interferometry Fourier optics nonlinear optics and Fresnel equations **Introduction to Optics** George Asimellis, 2019 **Introduction to Optics I** Ksenia Dolgaleva, 2020-10-14 This book *Introduction to Optics I Interaction of Light with Matter* is the first book in a series of four covering the introduction to optics and optical components The author's targeted goal for this series is to provide clarity for the reader by addressing common difficulties encountered while trying to understand various optics concepts This first book is organized and written in a way that is easy to follow and is meant to be an excellent first book on optics eventually leading the way for further study Those with technical backgrounds as well as undergraduate students studying optics for the first time can benefit from this book series The current book includes three chapters on light and its characteristics Chapter 1 on matter from the standpoint of optics Chapter 2 and on the interaction of light with matter Chapter 3 Among the characteristics of light the ones characterizing its speed color and strength are covered The polarization of light will be covered in the next book of the series where we discuss optical components Chapter 2 discusses various atomic and molecular transitions activated by light optical transitions Different kinds of natural bulk material media are described crystalline and amorphous atomic and molecular conductive and insulating Chapter 3 on the interaction of light with matter describes naturally occurring phenomena such as absorption dispersion and nonlinear optical interactions The discussion is

provided for the natural bulk optical materials only The interfaces between various materials will be covered in the next book on optical components The following three books of the series are planned as follows In the second book we will focus on passive optical components such as lenses mirrors guided wave and polarization optical devices In the third book we will discuss laser sources and optical amplifiers Finally the fourth book in the series will cover optoelectronic devices such as semiconductor light sources and detectors

An Introduction to Optics in Computers Henri H. Arsenault, Yunlong Sheng, 1992 This volume surveys the entire field of optical computing The emphasis is on breadth of coverage The book is descriptive the authors minimize the use of mathematics and it is therefore most suitable for those who require an overall view of what is going on in this field A detailed comparison is given of the capabilities of electronics and optics and the degree to which these capabilities have been achieved is indicated Other areas of focus include optical computing architectures components and technologies optical interconnects and optical neural nets Approximately 300 references to key works in the field are included
