Top 10 Strategic Technology Trends For 2018 Gartner:

Progress in Industrial Mathematics: Success Stories Manuel Cruz, Carlos Parés, Peregrina Quintela, 2021-03-19 This book presents a panorama about the recent progress of industrial mathematics from the point of view of both industrials and researchers. The chapters correspond to a selection of the contributions presented in the Industry Day and in the Minisymposium EU MATHS IN Success Stories of Applications of Mathematics to Industry organized in the framework of the International Conference ICIAM 2019 held in Valencia Spain on July 15-19, 2019. In the Industry Day included for the first time in this series of Conferences representatives of companies from different countries and several sectors presented their view about the benefits regarding the usage of mathematical tools and or collaboration with mathematicians. The contributions of this special session were addressed to industry people. Minisymposium contributions detailed some collaborations between mathematicians and industrials that led to real benefits in several European companies. All the speakers were affiliated in some of the European National Networks that constitute the European Service Network of Mathematics for Industry and Innovation EU MATHS IN. [Handbook Of Digital Enterprise Systems: Digital Twins, Simulation And Ai](#) Wolfgang Kuhn, 2019-06-04 Digitalization is changing nearly everything. This compendium highlights a comprehensive understanding of the concepts and technologies about digitalization in industrial environments using the Industrial Internet of Things, Digital Twins and data driven decision making approaches including Artificial Intelligence. The overview of industrial enterprise platforms and the consideration of future trends gives a fundamental idea of concepts and strategies, how to get started and about the required changes of business models. [Implementation and Benefits of Digital Twin on Decision Making and Data Quality Management](#) Florian Blaschke, 2024-04-11 Digital twin technology is becoming important for the realization of Industry 4.0 using cyber physical systems (CPS) and information technology. CPS form the backbone to support the creation of a network for decentralized and autonomous decision making. The design principles for Industry 4.0 serve as guidelines for virtualization concepts that are virtual copies of the physical world and create a link between the real and virtual worlds to collect data and monitor processes, the so called digital twin. In this book a theoretical digital twin driven decision making model has been developed that combines corporate data quality management, a process digital twin and a model driven decision support system. It leverages the benefits of the digital twin to create test and build a process in the virtual world that supports decision making by combining data analytics and visualization of insights to help managers make better decisions. **Data-Based Decision Making and Digital Transformation** Daniel J.
